166

3.2 Introduction

167 The information in this specification should be sufficient for a provider or consumer of this data to identify
168 unambiguously the classes, properties, methods, and values that shall be instantiated and manipulated to
169 represent and manage a network port that provides a LAN interface to a host and its associated
170 configuration information. The target audience for this specification is implementers who are writing CIM-
171 based providers or consumers of management interfaces that represent the component described in this
172 document.

173

Host LAN Network Port Profile

174

1 Scope

175
176
177
178

The *Host LAN Network Port Profile* extends the management capability of referencing profiles by adding the capability to represent a network port that provides a LAN interface to a host system, its associated controller, and network interfaces. Associations with the port's physical aspects and profile-implementation version information are modeled in this profile.

3 Terms and Definitions

196

For the purposes of this document, the following terms and definitions apply.

197

1.

198

can

199

used for statements of possibility and capability, whether material, physical, or causal

200

2.

201

cannot

202

used for statements of possibility and capability, whether material, physical, or causal

203

3.

204

conditional

205
206

indicates requirements to be followed strictly in order to conform to the document when the specified conditions are met

- 207 **4.**
208 **mandatory**
209 indicates requirements to be followed strictly in order to conform to the document and from which no
210 deviation is permitted
- 211 **5.**
212 **may**
213 indicates a course of action permissible within the limits of the document
- 214 **6.**
215 **need not**
216 indicates a course of action permissible within the limits of the document
- 217 **7.**
218 **optional**
219 indicates a course of action permissible within the limits of the document
- 220 **8.**
221 **referencing profile**
222 indicates a profile that owns the definition of this class and can include a reference to this profile in its
223 "Related Profiles" table
- 224 **9.**
225 **shall**
226 indicates requirements to be followed strictly in order to conform to the document and from which no
227 deviation is permitted
- 228 **10.**
229 **shall not**
230 indicates requirements to be followed strictly in order to conform to the document and from which no
231 deviation is permitted
- 232 **11.**
233 **should**
234 indicates that among several possibilities, one is recommended as particularly suitable, without
235 mentioning or excluding others, or that a certain course of action is preferred but not necessarily required
- 236 **12.**
237 **should not**
238 indicates that a certain possibility or course of action is deprecated but not prohibited

239 **4 Symbols and Abbreviated Terms**

240 The following symbols and abbreviations are used in this document.

- 241 **4.1**
242 **DNS**
243 Domain Name System
- 244 **4.2**
245 **DHCP**
246 Dynamic Host Configuration Protocol

247 **4.3**
 248 **LAN**
 249 Local Area Network

250 **5 Synopsis**

251 **Profile Name:** Host LAN Network Port

252 **Version:** 1.0.1

253 **Organization:** DMTF

254 **CIM Schema version:** 2.22

255 **Central Class:** CIM_NetworkPort

256 **Scoping Class:** CIM_ComputerSystem

257 This abstract profile specification shall not be directly implemented; implementations shall be based on a
 258 profile specification that specializes the requirements of this profile.

259 The *Host LAN Network Port Profile* extends the management capability of referencing profiles by adding
 260 the capability to represent a network port that provides a LAN interface in a managed system. This profile
 261 includes a specification of the network port, associated controller, associated network endpoint, and the
 262 realization of the connection in a physical connector.

263 CIM_NetworkPort shall be the Central Class of this profile. The instance of CIM_NetworkPort shall be the
 264 Central Instance of this profile. CIM_ComputerSystem shall be the Scoping Class of this profile. The
 265 instance of CIM_ComputerSystem with which the Central Instance is associated through an instance of
 266 CIM_SystemDevice shall be the Scoping Instance of this profile.

267 Table 1 identifies profiles on which this profile has a dependency.

268 **Table 1 – Referenced Profiles**

Profile Name	Organization	Version	Description
Profile Registration	DMTF	1.0	Mandatory
Physical Asset	DMTF	1.0	Optional. See 7.1.6.

269 **6 Description**

270 The *Host LAN Network Port Profile* describes a network port and, optionally, an associated controller,
 271 associated network interfaces, and the realization of the connection in a physical connector.

272 The following functionality is mandatory within the scope of this profile:

- 273 • a specification of the network port and related hardware
 274 • network interfaces active over the network port

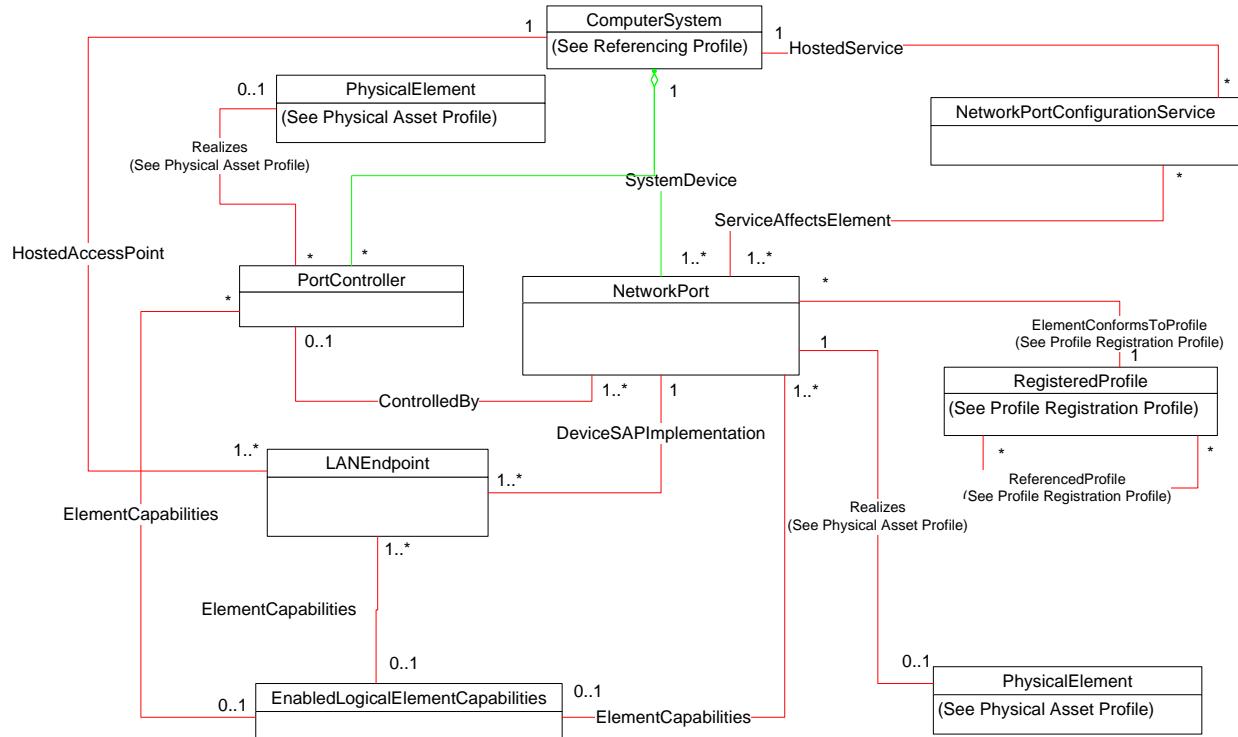

275 The following functionality is optional within the scope of this profile:

- 276 • modeling of the controller and its relationship with the network port

277 The following functionality is not covered in this profile:

- 278 • modeling of the networks in which the network interface participates

279 Figure 1 represents the class schema for the *Host LAN Network Port Profile*. For simplicity, the prefix
 280 CIM_ has been removed from the names of the classes. The CIM_NetworkPort class represents a
 281 network port of the system with one or more communication endpoints (that is, a communication
 282 interface) represented through CIM_LANEndpoint. A given CIM_LANEndpoint on the network port is
 283 identified by a MAC address to which the network port will respond. A network port can have an
 284 associated controller. The controller is represented by an instance of CIM_PortController. The
 285 relationship between the controller and port is modeled through the CIM_ControlledBy association. The
 286 CIM_NetworkPortConfigurationService class provides the ability to manage network interfaces associated
 287 with a network port.

288

289 **Figure 1 – Host LAN Network Port Profile: Class Diagram**

290 **7 Implementation Requirements**

291 This clause details the requirements related to the arrangement of instances and properties of instances
 292 for implementations of this profile.

293 **7.1 Representing a Network Port**

294 An instance of CIM_NetworkPort shall represent the network port.

295 **7.1.1 CIM_NetworkPort.EnabledState — Enabled but Offline**

296 A value of 6 (Enabled but Offline) shall indicate that the underlying device is enabled but cannot
 297 communicate with the physical network. For example, this state is appropriate if the network cable is not
 298 attached to the physical connector.

299 7.1.2 Network Port State Management Is Supported — Conditional

300 When management of the state of a Network Port is supported, exactly one instance of
301 CIM_EnabledLogicalElementCapabilities shall be associated with the CIM_NetworkPort instance through
302 an instance of CIM_ElementCapabilities.

303 Support for managing the state of the Network Port is optional behavior. This clause describes the CIM
304 elements and behaviors that shall be implemented when this behavior is supported.

305 **Conditional Determination:** A client can determine whether state management is supported as follows:

- 306 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the
307 CIM_NetworkPort instance.
- 308 2) Query the value of the RequestedStatesSupported property. If at least one value is specified,
309 state management is supported.

310 7.1.2.1 CIM_EnabledLogicalElementCapabilities

311 When state management is supported, exactly one instance of CIM_EnabledLogicalElementCapabilities
312 shall be associated with the CIM_NetworkPort instance through an instance of the
313 CIM_ElementCapabilities association and it shall be subject to the conditions in this clause.

314 7.1.2.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported

315 The RequestedStatesSupported property may contain one or more of the following values: 2 (Enabled), 3
316 (Disabled), or 11 (Reset).

317 7.1.2.2 CIM_NetworkPort.RequestedState

318 When the CIM_NetworkPort.RequestStateChange() method is successfully invoked, the value of the
319 RequestedState property shall be the value of the RequestedState parameter. If the method is not
320 successfully invoked, the value of the RequestedState property is indeterminate.

321 The CIM_NetworkPort.RequestedState property shall have one of the values specified in the
322 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property or 5 (No Change).

323 7.1.2.3 CIM_NetworkPort.EnabledState

324 When the RequestedState parameter has a value of 2 (Enabled) or 3 (Disabled) and the
325 CIM_NetworkPort.RequestStateChange() method completes successfully, the value of the EnabledState
326 property shall equal the value of the CIM_NetworkPort.RequestedState property.

327 If the method does not complete successfully, the value of the EnabledState property is indeterminate.

328 The EnabledState property shall have the value 2 (Enabled), 3 (Disabled), or 6 (Enabled but Offline).

329 7.1.3 Network Port State Management Is Not Supported

330 This clause describes the CIM elements and behaviors that shall be implemented when management of
331 the Network Port state is not supported.

332 7.1.3.1 CIM_EnabledLogicalElementCapabilities

333 When state management is not supported, exactly one instance of
334 CIM_EnabledLogicalElementCapabilities may be associated with the CIM_NetworkPort instance through
335 an instance of the CIM_ElementCapabilities association and it shall be subject to the conditions in this
336 clause.

337 **7.1.3.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported**

338 The CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property shall not contain any
339 values.

340 **7.1.3.2 CIM_NetworkPort.RequestedState**

341 The RequestedState property shall have the value 12 (Not Applicable).

342 **7.1.3.3 CIM_NetworkPort.EnabledState**

343 The EnabledState property shall have one of the following values: 2 (Enabled), 3 (Disabled), 5 (Not
344 Applicable), or 6 (Enabled but Offline).

345 **7.1.4 Modifying ElementName Is Supported — Conditional**

346 The CIM_NetworkPort.ElementName property may support being modified by the ModifyInstance
347 operation. See 8.12.1.1. This behavior is conditional. This clause describes the CIM elements and
348 behavior requirements when an implementation supports client modification of the
349 CIM_NetworkPort.ElementName property.

350 **Client Determination:** A client can determine whether it can modify the ElementName as follows:

- 351 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the
352 CIM_NetworkPort instance.
- 353 2) Query the value of the ElementNameEditSupported property of the instance. If the value is
354 TRUE, the client can modify the CIM_NetworkPort.ElementName property.

355 **7.1.4.1 CIM_EnabledLogicalElementCapabilities**

356 An instance of CIM_EnabledLogicalElementCapabilities shall be associated with the CIM_NetworkPort
357 instance through an instance of CIM_ElementCapabilities.

358 **7.1.4.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported**

359 This property shall have a value of TRUE when the implementation supports client modification of the
360 CIM_NetworkPort.ElementName property.

361 **7.1.4.1.2 CIM_EnabledLogicalElement.MaxElementNameLen**

362 The MaxElementNameLen property shall be implemented.

363 **7.1.5 Modifying ElementName Is Not Supported**

364 This clause describes the CIM elements and behaviors that shall be implemented when the
365 CIM_NetworkPort.ElementName does not support being modified by the ModifyInstance operation.

366 **7.1.5.1 CIM_EnabledLogicalElementCapabilities**

367 An instance of CIM_EnabledLogicalElementCapabilities may be associated with the CIM_NetworkPort
368 instance through an instance of CIM_ElementCapabilities.

369 **7.1.5.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported**

370 This property shall have a value of FALSE when the implementation does not support client modification
371 of the CIM_NetworkPort.ElementName property.

372 **7.1.5.1.2 CIM_EnabledLogicalElement.MaxElementNameLen**

373 The MaxElementNameLen property may be implemented. The MaxElementNameLen property is
374 irrelevant in this context.

375 **7.1.6 Representing the Physical Packaging**

376 Support for representing the physical packaging of the network device is optional. The physical packaging
377 may be modeled using one or more instances of CIM_PhysicalElement in accordance with the [Physical
378 Asset Profile](#).

379 In addition, an implementation may use an instance of CIM_PhysicalConnector to represent the physical
380 connector. When an implementation instruments an instance of CIM_PhysicalConnector to represent the
381 physical connector of the network device for connecting to the network, the instance of
382 CIM_PhysicalConnector shall be compliant with the [Physical Asset Profile](#). Instrumentation of the
383 CIM_Realizes class is conditional. If a corresponding instance of CIM_PhysicalConnector is instantiated,
384 it shall be associated to the corresponding CIM_NetworkPort via a CIM_Realizes instance.

385 **7.2 Representing a Communication Endpoint**

386 At least one instance of CIM_LANEndpoint shall represent a communication endpoint at the data-link
387 layer.

388 **7.2.1 Endpoint Identified by Hardware MAC**

389 There shall be exactly one instance of CIM_LANEndpoint in which the MACAddress property has the
390 same value as the PermanentAddress property of the associated CIM_NetworkPort instance.

391 **7.2.2 Communication Endpoint Identified by Assigned MAC**

392 For each communication endpoint of the network port, there shall be exactly one instance of
393 CIM_LANEndpoint in which the MACAddress property contains the value of a MAC address to which the
394 network port will respond.

395 **7.2.3 Relationship between the Interface and Port**

396 For each instance of CIM_LANEndpoint, one instance of CIM_DeviceSAPIImplementation shall associate
397 the CIM_LANEndpoint with the CIM_NetworkPort.

398 **7.2.4 Endpoint State Management Is Supported — Conditional**

399 When management of the state of a port endpoint is supported, exactly one instance of
400 CIM_EnabledLogicalElementCapabilities shall be associated with the CIM_LANEndpoint instance
401 through an instance of CIM_ElementCapabilities.

402 Support for managing the state of the port endpoint is optional behavior. This clause describes the CIM
403 elements and behaviors that shall be implemented when this behavior is supported.

404 **7.2.4.1 CIM_EnabledLogicalElementCapabilities**

405 When state management is supported, exactly one instance of CIM_EnabledLogicalElementCapabilities
406 shall be associated with the CIM_LANEndpoint instance through an instance of the
407 CIM_ElementCapabilities association.

408 **7.2.4.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported**

409 The RequestedStatesSupported property may contain zero or more of the following values: 2 (Enabled),
410 3 (Disabled), or 11 (Reset).

411 7.2.4.2 CIM_LANEndpoint.RequestedState

412 When the CIM_LANEndpoint.RequestStateChange() method is successfully invoked, the value of the RequestedState property shall be the value of the RequestedState parameter. If the method is not
413 successfully invoked, the value of the RequestedState property is indeterminate.
414

415 The CIM_LANEndpoint.RequestedState property shall have one of the values specified in the
416 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property or 5 (No Change).

417 7.2.4.3 CIM_LANEndpoint.EnabledState

418 When the RequestedState parameter has a value of 2 (Enabled) or 3 (Disabled) and the
419 CIM_LANEndpoint.RequestStateChange() method completes successfully, the value of the EnabledState
420 property shall equal the value of the CIM_LANEndpoint.RequestedState property.

421 If the method does not complete successfully, the value of the EnabledState property is indeterminate.
422 The EnabledState property shall have the value 2 (Enabled) or 3 (Disabled).

423 7.2.5 Endpoint State Management Is Not Supported

424 This clause describes the CIM elements and behaviors that shall be implemented when management of
425 the endpoint state is not supported.

426 7.2.5.1 CIM_EnabledLogicalElementCapabilities

427 When state management is not supported, exactly one instance of
428 CIM_EnabledLogicalElementCapabilities may be associated with the CIM_LANEndpoint instance through
429 an instance of the CIM_ElementCapabilities association.

430 7.2.5.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported

431 The CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property shall not contain any
432 values.

433 7.2.5.2 CIM_LANEndpoint.RequestedState

434 The RequestedState property shall have the value 12 (Not Applicable).

435 7.2.5.3 CIM_LANEndpoint.EnabledState

436 The EnabledState property shall have one of the following values: 2 (Enabled), 3 (Disabled), or 5 (Not
437 Applicable).

438 7.2.6 Modifying ElementName Is Supported — Conditional

439 The CIM_LANEndpoint.ElementName property may support being modified by the ModifyInstance
440 operation. See 8.11.2.2. This behavior is conditional. This clause describes the CIM elements and
441 behavior requirements when an implementation supports client modification of the
442 CIM_LANEndpoint.ElementName property.

443 7.2.6.1 CIM_EnabledLogicalElementCapabilities

444 An instance of CIM_EnabledLogicalElementCapabilities shall be associated with the CIM_LANEndpoint
445 instance through an instance of CIM_ElementCapabilities.

446 7.2.6.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported

447 This property shall have a value of TRUE when the implementation supports client modification of the
448 CIM_LANEndpoint.ElementName property.

449 **7.2.6.1.2 CIM_EnabledLogicalElement.MaxElementNameLen**

450 The MaxElementNameLen property shall be implemented.

451 **7.2.7 Modifying ElementName Is Not Supported**

452 This clause describes the CIM elements and behaviors that shall be implemented when the
453 CIM_LANEndpoint.ElementName does not support being modified by the ModifyInstance operation.

454 **7.2.7.1 CIM_EnabledLogicalElementCapabilities**

455 An instance of CIM_EnabledLogicalElementCapabilities may be associated with the CIM_LANEndpoint
456 instance through an instance of CIM_ElementCapabilities.

457 **7.2.7.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported**

458 This property shall have a value of FALSE when the implementation does not support client modification
459 of the CIM_LANEndpoint.ElementName property.

460 **7.2.7.1.2 CIM_EnabledLogicalElement.MaxElementNameLen**

461 The MaxElementNameLen property may be implemented. The MaxElementNameLen property is
462 irrelevant in this context.

463 **7.3 Managing Network Endpoints**

464 An implementation may support the creation and deletion of network endpoints for the network port.

465 When an implementation supports the creation of network endpoints, there shall be an instance of
466 CIM_NetworkPortConfigurationService. An instance of CIM_ServiceAffectsElement is conditional. When
467 an instance of CIM_NetworkPortConfigurationService is instrumented, there shall be an instance of
468 CIM_ServiceAffectsElement that references the Central Instance and the
469 CIM_NetworkPortConfigurationService instance. The CIM_NetworkPortConfigurationService instance
470 shall be associated to an instance of CIM_ComputerSystem through an instance of CIM_HostedService.
471 A network endpoint can be created using the AddLANEndpoint() method of the
472 CIM_NetworkPortConfigurationService, as described in 8.1.

473 An implementation can remove a network endpoint by using the intrinsic DeleteInstance operation
474 defined in 8.11.1.

475 **7.4 Representing Multiple Ports Controlled from a Single Controller**

476 In some implementations, a single chip or device provides multiple network interfaces to a system. In
477 other implementations, there is a one-to-one correspondence between the controller component and the
478 actual network interface. An implementation may explicitly instrument the relationship between the
479 controller and interfaces. This behavior is optional. When this optional behavior is supported, the
480 requirements outlined in this clause shall be met.

481 A client can determine if the port controller is modeled by looking for an instance of CIM_PortController
482 that is associated with the Central Instance of this profile through an instance of CIM_ControlledBy.

483 **7.4.1 Modeling the Controller**

484 An instance of CIM_PortController shall represent the controller.

485 **7.4.2 Relationship between Controller and Port**

486 For each port controlled by the controller, an instance of CIM_ControlledBy shall associate the instance of
487 CIM_PortController with the instance of CIM_NetworkPort.

488 7.4.3 Controller State Management Is Supported — Conditional

489 When management of the state of a port controller is supported, exactly one instance of
490 CIM_EnabledLogicalElementCapabilities shall be associated with the CIM_PortController instance
491 through an instance of CIM_ElementCapabilities.

492 Support for managing the state of the port controller is optional behavior. This clause describes the CIM
493 elements and behaviors that shall be implemented when this behavior is supported.

494 **Conditional Determination:** A client can determine whether state management is supported as follows:

- 495 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the
496 CIM_PortController instance.
- 497 2) Query the value of the RequestedStatesSupported property. If at least one value is specified,
498 state management is supported.

499 7.4.3.1 CIM_EnabledLogicalElementCapabilities

500 When state management is supported, exactly one instance of CIM_EnabledLogicalElementCapabilities
501 shall be associated with the CIM_PortController instance through an instance of the
502 CIM_ElementCapabilities association.

503 7.4.3.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported

504 The RequestedStatesSupported property may contain zero or more of the following values: 2 (Enabled),
505 3 (Disabled), or 11 (Reset).

506 7.4.3.2 CIM_PortController.RequestedState

507 When the CIM_PortController.RequestStateChange() method is successfully invoked, the value of the
508 RequestedState property shall be the value of the RequestedState parameter. If the method is not
509 successfully invoked, the value of the RequestedState property is indeterminate.

510 The CIM_PortController.RequestedState property shall have one of the values specified in the
511 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property or 5 (No Change).

512 7.4.3.3 CIM_PortController.EnabledState

513 When the RequestedState parameter has a value of 2 (Enabled) or 3 (Disabled) and the
514 CIM_PortController.RequestStateChange() method completes successfully, the value of the
515 EnabledState property shall equal the value of the CIM_PortController.RequestedState property.

516 If the method does not complete successfully, the value of the EnabledState property is indeterminate.
517 The EnabledState property shall have the value 2 (Enabled) or 3 (Disabled).

518 7.4.4 Controller State Management Is Not Supported

519 This clause describes the CIM elements and behaviors that shall be implemented when management of
520 the controller state is not supported.

521 7.4.4.1 CIM_EnabledLogicalElementCapabilities

522 When state management is not supported, exactly one instance of
523 CIM_EnabledLogicalElementCapabilities may be associated with the CIM_PortController instance
524 through an instance of the CIM_ElementCapabilities association.

525 **7.4.4.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported**

526 The CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property shall not contain any
527 values.

528 **7.4.4.2 CIM_PortController.RequestedState**

529 The RequestedState property shall have the value 12 (Not Applicable).

530 **7.4.4.3 CIM_PortController.EnabledState**

531 The EnabledState property shall have one of the following values: 2 (Enabled), 3 (Disabled), or 5 (Not
532 Applicable).

533 **7.4.5 Modifying ElementName Is Supported—Conditional**

534 The CIM_PortController.ElementName property may support being modified by the ModifyInstance
535 operation. See 8.14.1.1. This behavior is conditional. This clause describes the CIM elements and
536 behavior requirements when an implementation supports client modification of the
537 CIM_PortController.ElementName property.

538 **Client Determination:** A client can determine whether it can modify the ElementName as follows:

- 539 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the
540 CIM_PortController instance.
- 541 2) Query the value of the ElementNameEditSupported property of the instance. If the value is
542 TRUE, the client can modify the CIM_PortController.ElementName property.

543 **7.4.5.1 CIM_EnabledLogicalElementCapabilities**

544 An instance of CIM_EnabledLogicalElementCapabilities shall be associated with the CIM_PortController
545 instance through an instance of CIM_ElementCapabilities.

546 **7.4.5.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported**

547 The ElementNameEditSupported property shall have a value of TRUE when the implementation supports
548 client modification of the CIM_PortController.ElementName property.

549 **7.4.5.1.2 CIM_EnabledLogicalElement.MaxElementNameLen**

550 The MaxElementNameLen property shall be implemented.

551 **7.4.6 Modifying ElementName Is Not Supported**

552 This clause describes the CIM elements and behaviors that shall be implemented when the
553 CIM_PortController.ElementName does not support being modified by the ModifyInstance operation.

554 **7.4.6.1 CIM_EnabledLogicalElementCapabilities**

555 An instance of CIM_EnabledLogicalElementCapabilities may be associated with the CIM_PortController
556 instance through an instance of CIM_ElementCapabilities.

557 **7.4.6.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported**

558 The ElementNameEditSupported property shall have a value of FALSE when the implementation does
559 not support client modification of the CIM_PortController.ElementName property.

560 **7.4.6.1.2 CIM_EnabledLogicalElement.MaxElementNameLen**

561 The MaxElementNameLen property may be implemented. The MaxElementNameLen property is
562 irrelevant in this context.

563 **8 Methods**

564 This clause details the requirements for supporting intrinsic operations and extrinsic methods for the CIM
565 elements defined by this profile.

566 **8.1 CIM_NetworkPortConfigurationService.AddLANEndpoint()**

567 The AddLANEndpoint() method is used to create a new endpoint on a network port. This method shall be
568 supported when the CIM_NetworkPortConfigurationService is instrumented. When this method is
569 invoked, the implementation shall attempt to create a new instance of CIM_LANEndpoint. The
570 MACAddress property of the CIM_LANEndpoint instance shall have the value of the Address parameter
571 of the method invocation.

572 When the LANID parameter is specified in the method invocation, the LANID property of the
573 CIM_LANEndpoint instance shall have the value of the LANID parameter. When the LANID parameter is
574 not specified in the method invocation, the LANID property of the CIM_LANEndpoint instance shall have
575 a value of NULL.

576 When the AliasAddresses parameter is specified in the method invocation, the AliasAddresses property
577 of the CIM_LANEndpoint instance shall have the value of the AliasAddresses parameter. When the
578 AliasAddresses parameter is not specified in the method invocation, the AliasAddresses property of the
579 CIM_LANEndpoint instance shall have a value of NULL.

580 When the GroupAddresses parameter is specified in the method invocation, the GroupAddresses
581 property of the CIM_LANEndpoint instance shall have the value of the GroupAddresses parameter. When the
582 GroupAddresses parameter is not specified in the method invocation, the GroupAddresses property
583 of the CIM_LANEndpoint instance shall have a value of NULL.

584 Before creating the instance of CIM_LANEndpoint, the implementation shall verify that the communication
585 endpoint represented by the resultant CIM_LANEndpoint instance is valid for the CIM_NetworkPort
586 instance that is identified by the Port parameter of the method invocation. If the resultant
587 CIM_LANEndpoint represents a valid endpoint for the identified CIM_NetworkPort instance, the
588 implementation shall create the following instances:

- 589
 - the instance of CIM_LANEndpoint described in the preceding paragraph
 - an instance of CIM_DeviceSAPIImplementation that references the newly created instance of
591 CIM_LANEndpoint and the instance of CIM_NetworkPort that is identified by the Port parameter
592 of the method invocation
 - an instance of CIM_HostedAccessPoint that references the CIM_LANEndpoint and references
594 the instance of CIM_ComputerSystem with which the instance of CIM_NetworkPort that the Port
595 parameter identified is associated through the CIM_SystemDevice association

596 If an implementation is unable to create the three required instances, the implementation shall not create
597 any of the instances and shall return a value of 2 (Error Occurred) as the return code of the method
598 invocation. A method invocation might fail, for example, if a network port supports N communication
599 endpoints, N communication endpoints are already associated with the network port, and the client
600 attempts to create another endpoint.

601 Detailed requirements of the AddLANEndpoint() method are specified in Table 2 and Table 3.

602 No standard messages are defined.

603 **Table 2 – CIM_NetworkPortConfigurationService.AddLANEndpoint() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
2	Error occurred

604 **Table 3 – CIM_NetworkPortConfigurationService.AddLANEndpoint() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN, REQ	Port	CIM_NetworkPort REF	None
OUT	Endpoint	CIM_LANEndpoint REF	None
IN, REQ	Address	string	None
IN	LANID	string	None
IN	AliasAddresses	string	None
IN	GroupAddresses	string	None

605 **8.2 CIM_NetworkPort.RequestStateChange()**

606 Invocation of the RequestStateChange() method changes the element's state to the value specified in the
 607 RequestedState parameter. The 2 (Enabled) and 3 (Disabled) values of the RequestedState parameter
 608 shall correspond to enabling or disabling the network interface that the CIM_NetworkPort instance
 609 represents. A value of 11 (Reset) for the RequestedState parameter shall be equivalent to disabling and
 610 then enabling the network interface that the CIM_NetworkPort instance represents.

611 Detailed requirements of the RequestStateChange() method are specified in Table 4 and Table 5.

612 No standard messages are defined.

613 Invoking the RequestStateChange() method multiple times could result in earlier requests being
 614 overwritten or lost.

615 **Table 4 – CIM_NetworkPort.RequestStateChange() Method: Return Code Values**

Value	Description
0	Request was successfully executed
2	Error occurred
0x1000	Job started: REF returned to started CIM_ConcreteJob

616

Table 5 – CIM_NetworkPort.RequestStateChange() Method: Parameters

Qualifiers	Name	Type	Description/Values
IN, REQ	RequestedState	uint16	Valid state values: 2 (Enabled) 3 (Disabled) 11 (Reset)
OUT	Job	CIM_ConcreteJob REF	Returned if job started
IN, REQ	TimeoutPeriod	datetime	Client specified maximum amount of time the transition to a new state is supposed to take: 0 or NULL – No time requirements <interval> – Maximum time allowed

617 **8.2.1.1 CIM_NetworkPort.RequestStateChange() ConditionalSupport**

618 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the CIM_NetworkPort
 619 instance and the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property contains
 620 at least one value, the CIM_NetworkPort.RequestStateChange() method shall be implemented and
 621 supported. The CIM_NetworkPort.RequestStateChange() method shall not return a value of 1 (Not
 622 Supported).

623 **8.3 CIM_LANEndpoint.RequestStateChange()**

624 Invocation of the RequestStateChange() method changes the element's state to the value specified in the
 625 RequestedState parameter. The 2 (Enabled) and 3 (Disabled) values of the RequestedState parameter
 626 will correspond to enabling or disabling the endpoint that the CIM_LANEndpoint instance represents. A
 627 value of 11 (Reset) for the RequestedState parameter shall be equivalent to disabling and then enabling
 628 the endpoint that the CIM_LANEndpoint instance represents.

629 Detailed requirements of the RequestStateChange() method are specified in Table 6 and Table 7.

630 No standard messages are defined.

631 Invoking the RequestStateChange method multiple times could result in earlier requests being overwritten
 632 or lost.

633

Table 6 – CIM_LANEndpoint.RequestStateChange() Method: Return Code Values

Value	Description
0	Request was successfully executed
2	Error occurred
0x1000	Job started: REF returned to started CIM_ConcreteJob

634

Table 7 – CIM_LANEndpoint.RequestStateChange() Method: Parameters

Qualifiers	Name	Type	Description/Values
IN, REQ	RequestedState	uint16	Valid state values: 2 (Enabled) 3 (Disabled) 11 (Reset)
OUT	Job	CIM_ConcreteJob REF	Returned if job started
IN, REQ	TimeoutPeriod	datetime	Client specified maximum amount of time the transition to a new state is supposed to take: 0 or NULL – No time requirements <interval> – Maximum time allowed

635 **8.3.1.1 CIM_LANEndpoint.RequestStateChange() Supported**

636 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the CIM_LANEndpoint
 637 instance and the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property contains
 638 at least one value, the CIM_LANEndpoint.RequestStateChange() method shall be implemented and
 639 supported. The CIM_LANEndpoint.RequestStateChange() method shall not return a value of 1 (Not
 640 Supported).

641 **8.4 CIM_PortController.RequestStateChange()**

642 Invocation of the RequestStateChange() method changes the element's state to the value specified in the
 643 RequestedState parameter. The 2 (Enabled) and 3 (Disabled) values of the RequestedState parameter
 644 shall correspond to enabling or disabling the controller that the CIM_PortController instance represents. A
 645 value of 11 (Reset) for the RequestedState parameter shall be equivalent to disabling and then enabling
 646 the controller that the CIM_PortController instance represents.

647 Detailed requirements of the RequestStateChange() method are specified in Table 8 and Table 9.

648 No standard messages are defined.

649 Invoking the RequestStateChange method multiple times could result in earlier requests being overwritten
 650 or lost.

651 **Table 8 – CIM_PortController.RequestStateChange() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
2	Error occurred
0x1000	Job started: REF returned to started CIM_ConcreteJob

652 **Table 9 – CIM_PortController.RequestStateChange() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN, REQ	RequestedState	uint16	Valid state values: 2 (Enabled) 3 (Disabled) 11 (Reset)
OUT	Job	CIM_ConcreteJob REF	Returned if job started
IN, REQ	TimeoutPeriod	datetime	Client specified maximum amount of time the transition to a new state is supposed to take: 0 or NULL – No time requirements <interval> – Maximum time allowed

653 **8.4.1.1 CIM_PortController.RequestStateChange() Supported**

654 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the CIM_PortController
 655 instance and the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property contains
 656 at least one value, the CIM_PortController.RequestStateChange() method shall be implemented and
 657 supported. The CIM_PortController.RequestStateChange() method shall not return a value of 1 (Not
 658 Supported).

659 **8.5 Profile Conventions for Operations**

660 For each profile class (including associations), the implementation requirements for operations, including
 661 those in the following default list, are specified in class-specific subclauses of this clause.

662 The default list of operations is as follows:

- 663 • GetInstance
- 664 • Associators
- 665 • AssociatorNames
- 666 • References
- 667 • ReferenceNames
- 668 • EnumerateInstances
- 669 • EnumerateInstanceNames

670 **8.6 CIM_ControlledBy**

671 Table 10 lists implementation requirements for operations. If implemented, these operations shall be
 672 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 10, all operations
 673 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

674 NOTE: Related profiles may define additional requirements on operations for the profile class.

675 **Table 10 – Operations: CIM_ControlledBy**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

676 **8.7 CIM_ElementCapabilities**

677 Table 11 lists implementation requirements for operations. If implemented, these operations shall be
 678 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 11, all operations
 679 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

680 NOTE: Related profiles may define additional requirements on operations for the profile class.

681 **Table 11 – Operations: CIM_ElementCapabilities**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

682 **8.8 CIM_EnabledLogicalElementCapabilities**

683 All operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

684 NOTE: Related profiles may define additional requirements on operations for the profile class.

685 **8.9 CIM_HostedAccessPoint**

686 Table 12, all operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

687 NOTE: Related profiles may define additional requirements on operations for the profile class.

688 **Table 12 – Operations: CIM_HostedAccessPoint**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

689 **8.10 CIM_HostedService**

690 Table 13, all operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

691 NOTE: Related profiles may define additional requirements on operations for the profile class.

692 **Table 13 – Operations: CIM_HostedService**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

693 **8.11 CIM_LANEndpoint**

694 Table 14 lists implementation requirements for operations. If implemented, these operations shall be
 695 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 14, all operations
 696 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

697 NOTE: Related profiles may define additional requirements on operations for the profile class.

698 **Table 14 – Operations: CIM_LANEndpoint**

Operation	Requirement	Messages
DeleteInstance	Optional. See 8.11.1.	None
ModifyInstance	Optional. See 8.11.2.	None

699 **8.11.1 CIM_LANEndpoint — DeleteInstance**

700 An implementation may support the DeleteInstance operation for instances of CIM_LANEndpoint. When
 701 the implementation supports the DeleteInstance operation, it may support the operation for some or all of
 702 the CIM_LANEndpoint instances implemented. When the DeleteInstance operation is supported for an
 703 instance of CIM_LANEndpoint, the implementation shall delete the instance of CIM_LANEndpoint and the
 704 instances of CIM_DeviceSAPIImplementation and CIM_HostedAccessPoint that reference the
 705 CIM_LANEndpoint instance.

706 The implementation shall not support the DeleteInstance operation for the CIM_LANEndpoint instance
 707 that is identified in 7.2.1.

708 **8.11.2 CIM_LANEndpoint — ModifyInstance**

709 This details the requirements for the ModifyInstance operation that is applied to an instance of
 710 CIM_LANEndpoint.

711 **8.11.2.1 CIM_LANEndpoint.MACAddress**

712 The ModifyInstance operation shall not modify the MACAddress property of a CIM_LANEndpoint
 713 instance.

714 **8.11.2.2 CIM_LANEndpoint.ElementName**

715 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the CIM_LANEndpoint
 716 instance and the CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported property has a
 717 value of TRUE, the implementation shall allow the ModifyInstance operation to change the value of the

718 ElementName property of the CIM_LANEndpoint instance. The ModifyInstance operation shall enforce
 719 the length restriction specified in the MaxElementNameLen property of the
 720 CIM_EnabledLogicalElementCapabilities instance.

721 When an instance of CIM_EnabledLogicalElementCapabilities is not associated with the
 722 CIM_LANEndpoint instance, or the ElementNameEditSupported property of the
 723 CIM_EnabledLogicalElementCapabilities instance has a value of FALSE, the implementation shall not
 724 allow the ModifyInstance operation to change the value of the ElementName property of the
 725 CIM_LANEndpoint instance.

726 **8.12 CIM_NetworkPort**

727 Table 15 lists implementation requirements for operations. If implemented, these operations shall be
 728 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 15Table 10, all
 729 operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

730 NOTE: Related profiles may define additional requirements on operations for the profile class.

731 **Table 15 – Operations: CIM_NetworkPort**

Operation	Requirement	Messages
ModifyInstance	Optional. See 8.12.1.1.	None

732 **8.12.1 CIM_NetworkPort — ModifyInstance Operation**

733 This details the specific requirements for the ModifyInstance operation that is applied to an instance of
 734 CIM_NetworkPort.

735 **8.12.1.1 CIM_NetworkPort.ElementName**

736 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the CIM_NetworkPort
 737 instance and the CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported property has a
 738 value of TRUE, the implementation shall allow the ModifyInstance operation to change the value of the
 739 ElementName property of the CIM_NetworkPort instance. The ModifyInstance operation shall enforce the
 740 length restriction specified in the MaxElementNameLen property of the
 741 CIM_EnabledLogicalElementCapabilities instance.

742 When an instance of CIM_EnabledLogicalElementCapabilities is not associated with the
 743 CIM_NetworkPort instance, or the ElementNameEditSupported property of the
 744 CIM_EnabledLogicalElementCapabilities instance has a value of FALSE, the implementation shall not
 745 allow the ModifyInstance operation to change the value of the ElementName property of the
 746 CIM_NetworkPort instance.

747 **8.13 CIM_NetworkPortConfigurationService**

748 All operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

749 NOTE: Related profiles may define additional requirements on operations for the profile class.

750 **8.14 CIM_PortController**

751 Table 16 lists implementation requirements for operations. If implemented, these operations shall be
 752 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 16, all operations
 753 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

754 NOTE: Related profiles may define additional requirements on operations for the profile class.

755 **Table 16 – Operations: CIM_PortController**

Operation	Requirement	Messages
ModifyInstance	Optional. See 8.14.1.1.	None

756 **8.14.1 CIM_PortController — ModifyInstance Operation**

757 This clause details the specific requirements for the ModifyInstance operation that is applied to an
 758 instance of CIM_PortController.

759 **8.14.1.1 CIM_PortController.ElementName Property**

760 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the CIM_PortController
 761 instance and the CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported property has a
 762 value of TRUE, the implementation shall allow the ModifyInstance operation to change the value of the
 763 ElementName property of the CIM_PortController instance. The ModifyInstance operation shall enforce
 764 the length restriction specified in the MaxElementNameLen property of the
 765 CIM_EnabledLogicalElementCapabilities instance.

766 When an instance of CIM_EnabledLogicalElementCapabilities is not associated with the
 767 CIM_PortController instance, or the ElementNameEditSupported property of the
 768 CIM_EnabledLogicalElementCapabilities instance has a value of FALSE, the implementation shall not
 769 allow the ModifyInstance operation to change the value of the ElementName property of the
 770 CIM_PortController instance.

771 **8.15 CIM_ServiceAffectsElement**

772 Table 17 lists implementation requirements for operations. If implemented, these operations shall be
 773 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 17, all operations
 774 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

775 NOTE: Related profiles may define additional requirements on operations for the profile class.

776 **Table 17 – Operations: CIM_ServiceAffectsElement**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None

777 **8.16 CIM_SystemDevice**

778 Table 18 lists implementation requirements for operations. If implemented, these operations shall be
 779 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 18, all operations
 780 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

781 NOTE: Related profiles may define additional requirements on operations for the profile class.

783 **9 Use Cases**

784 This clause contains object diagrams and use cases for the *Host LAN Network Port Profile*.

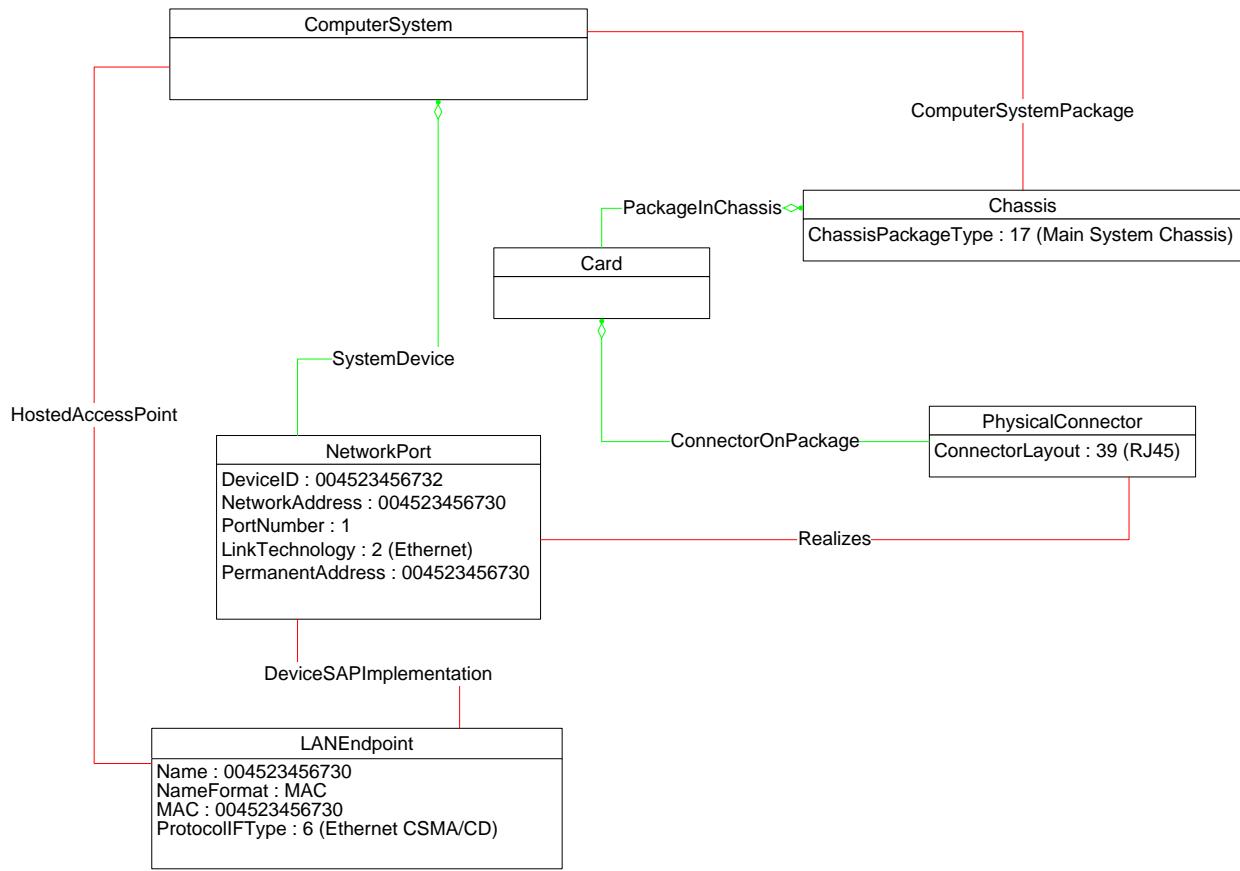

785 **9.1 Object Diagrams**

786 The object diagram in Figure 2 shows how instances of CIM_RegisteredProfile are used to identify the
 787 version of the *Host LAN Network Port Profile* with which an instance of CIM_NetworkPort and its
 788 associated instances are conformant. An instance of CIM_RegisteredProfile exists for each profile that is
 789 instrumented in the system. One instance of CIM_RegisteredProfile identifies the DMTF *Base Server*
 790 *Profile*, version 1.0.0. The other instance identifies the DMTF *Network Port Profile*, version 1.0.0.

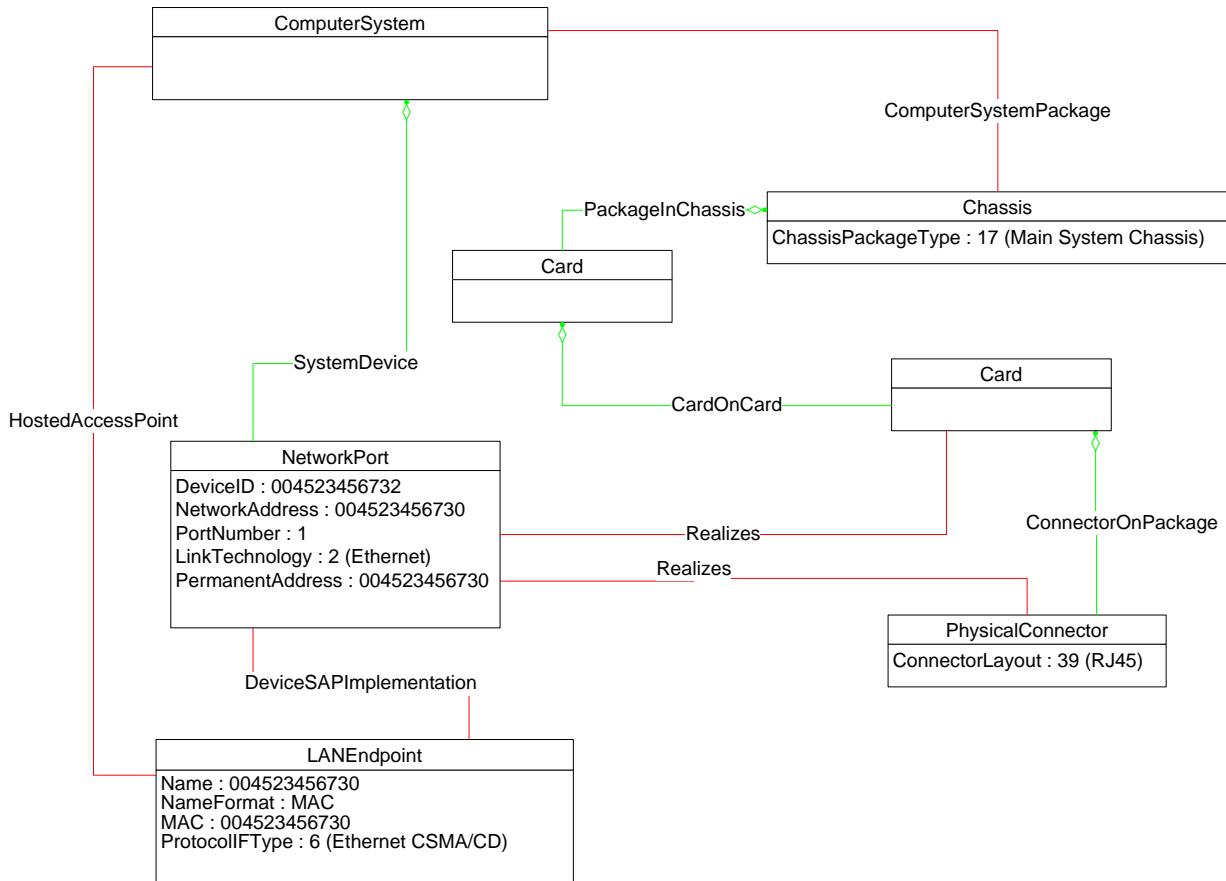

791 The CIM_NetworkPort instance is scoped to an instance of CIM_ComputerSystem. This instance of
 792 CIM_ComputerSystem is conformant with the DMTF *Base Server Profile*, version 1.0.0 as indicated by
 793 the CIM_ElementConformsToProfile association to the CIM_RegisteredProfile instance. The Scoping
 794 Instance in Figure 2 is the CIM_ComputerSystem instance. The Central Instance is the CIM_NetworkPort.
 795 The CIM_ReferencedProfile relationship between *BaseSystem* and *net* places the CIM_NetworkPort
 796 instance within the scope of *net*. Thus, the CIM_NetworkPort instance is conformant with the *Host LAN*
 797 *Network Port Profile*, version 1.0.0.

**Figure 2 – Registered Profile**

800 Figure 3 is a simple object diagram for a single network port with a single active network interface. The
 801 network port is represented by an instance of CIM_NetworkPort. The active interface is represented by an
 802 instance of CIM_LANEndpoint, which is associated with the CIM_NetworkPort instance through the
 803 CIM_DeviceSAPIImplementation association. In the system modeled, the network port is reached through
 804 an RJ-45 connector located directly on the motherboard of the system. This connection is indicated by the
 805 CIM_Realizes association between the CIM_NetworkPort instance and the CIM_PhysicalConnector
 806 instance.

**Figure 3 – Single Interface**

- 809 The object diagram in Figure 4 illustrates the classes used to represent a network device located on a card that is plugged into a system board.
- 810

811

812

Figure 4 – Single Interface, Separate Card

813 The object diagram in Figure 5 provides an example of the classes used to represent a single controller
814 that controls two network ports. The controller is represented by an instance of CIM_PortController. Each
815 port is represented by an instance of CIM_NetworkPort. The ports being controlled by the port controller
816 are indicated by the CIM_ControlledBy associations between the CIM_PortController instance and the
817 CIM_NetworkPort instances. Each port has a single RJ-45 connector associated with it.

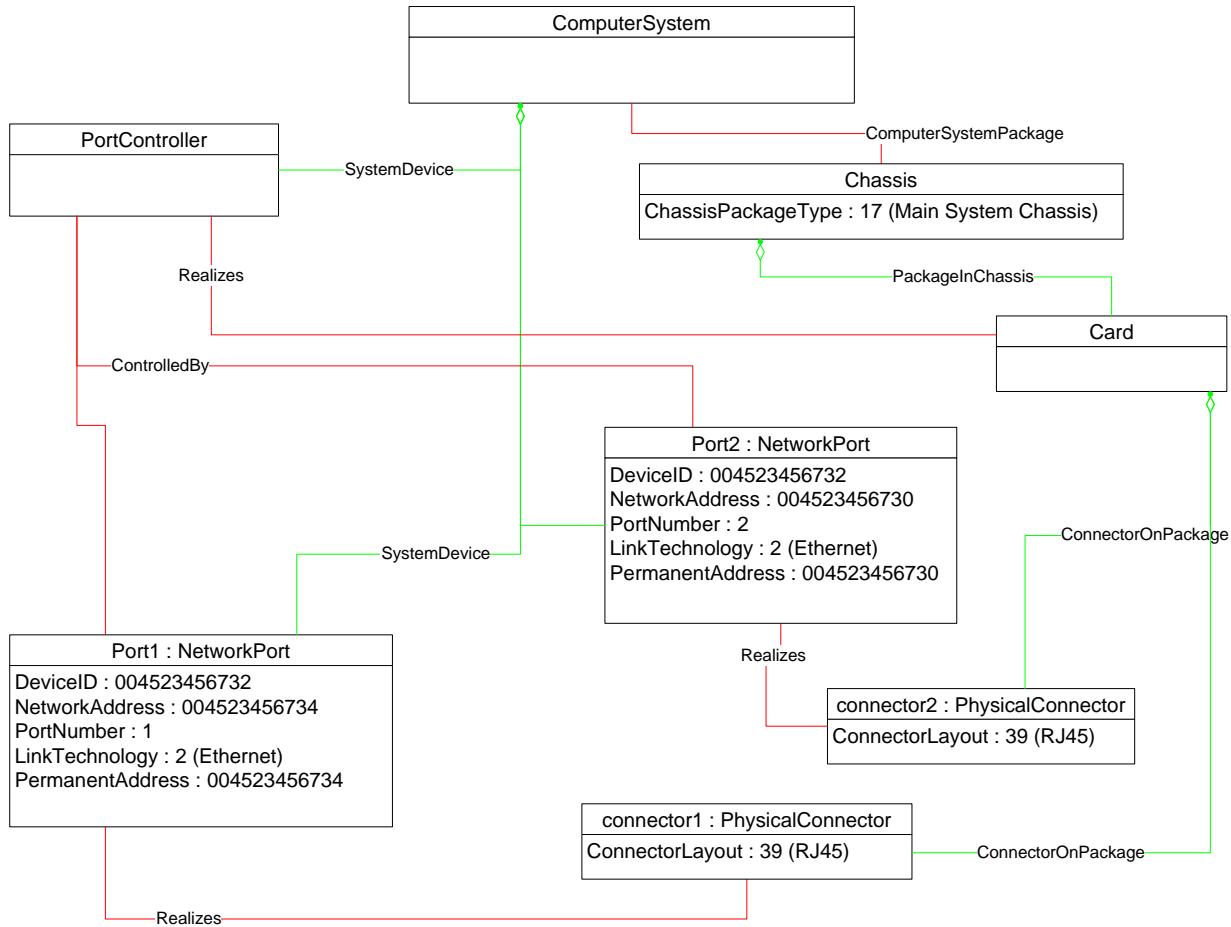

Figure 5 – One Controller for Two Ports

820 9.2 Querying MAC Address for an Interface

821 A client can determine the MAC addresses in use for a network interface as follows:

- 822 1) Find all instances of CIM_LANEndpoint that are associated with the CIM_NetworkPort instance
823 through instances of CIM_DeviceSAPIImplementation.

824 2) Query the MACAddress property of each instance of CIM_LANEndpoint.

825 9.3 Determining Physical Connector for a Network Address

826 One or more MAC addresses may be associated with a given physical network interface. It is useful for a
827 client to be able to determine which CIM_PhysicalConnector is associated with a given network address.

- 828 1) Find the instance of CIM_NetworkPort that is associated with the CIM_LANEndpoint instance
829 through an instance of CIM_DeviceSAPIImplementation.

830 2) Find the instance of CIM_PhysicalConnector that is associated with the CIM_NetworkPort
 831 instance through an instance of CIM_Realizes.

832 9.4 Determining If Physical Communication Is Possible

833 A client can determine whether the physical link for a Network interface is present as follows:

834 Query the value of the CIM_NetworkPort.EnabledState property. If the value of the property is
 835 "Enabled but Offline", there is a problem with the underlying physical link.

836 9.5 Correlating Controller and Port

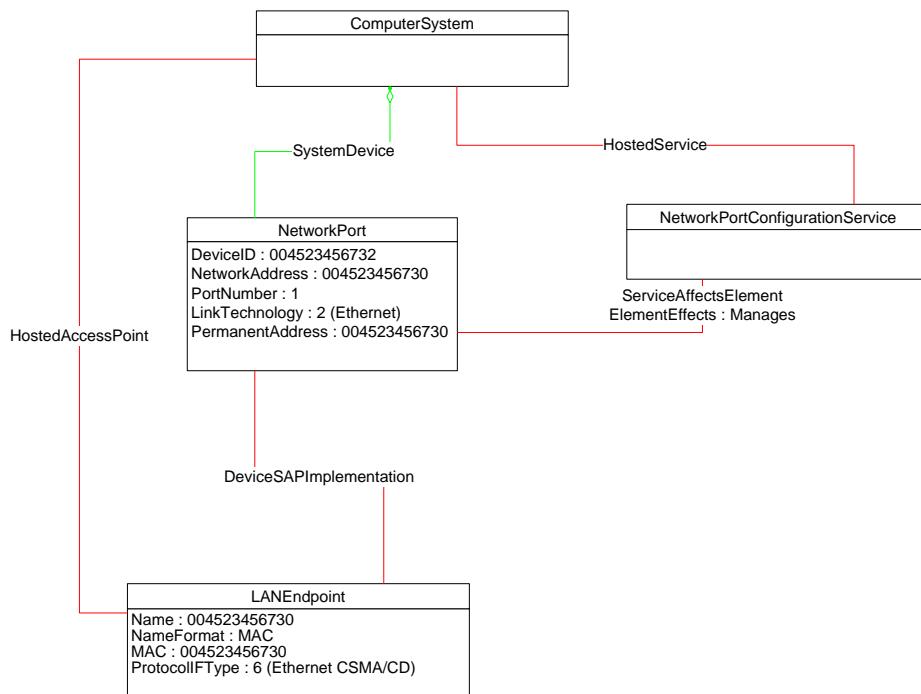

837 Multiple network ports may be controlled by a single controller. A client can determine which controller
 838 controls a network port as follows:

839 Find the instance of CIM_PortController that is associated with the CIM_NetworkPort instance
 840 through an instance of CIM_ControlledBy.

841 9.6 Adding an Endpoint to the Port

842 Some implementations support creating additional endpoints associated with the network port. A client
 843 can determine whether the implementation supports adding endpoints to a port by looking for an instance
 844 of CIM_NetworkPortConfigurationService that is associated with the CIM_NetworkPort instance through
 845 an instance of CIM_ServiceAffectsElement. The client can then invoke the AddLANEndpoint() method on
 846 the CIM_NetworkPortConfigurationService instance, specifying a MAC address, LAN ID, and so on.

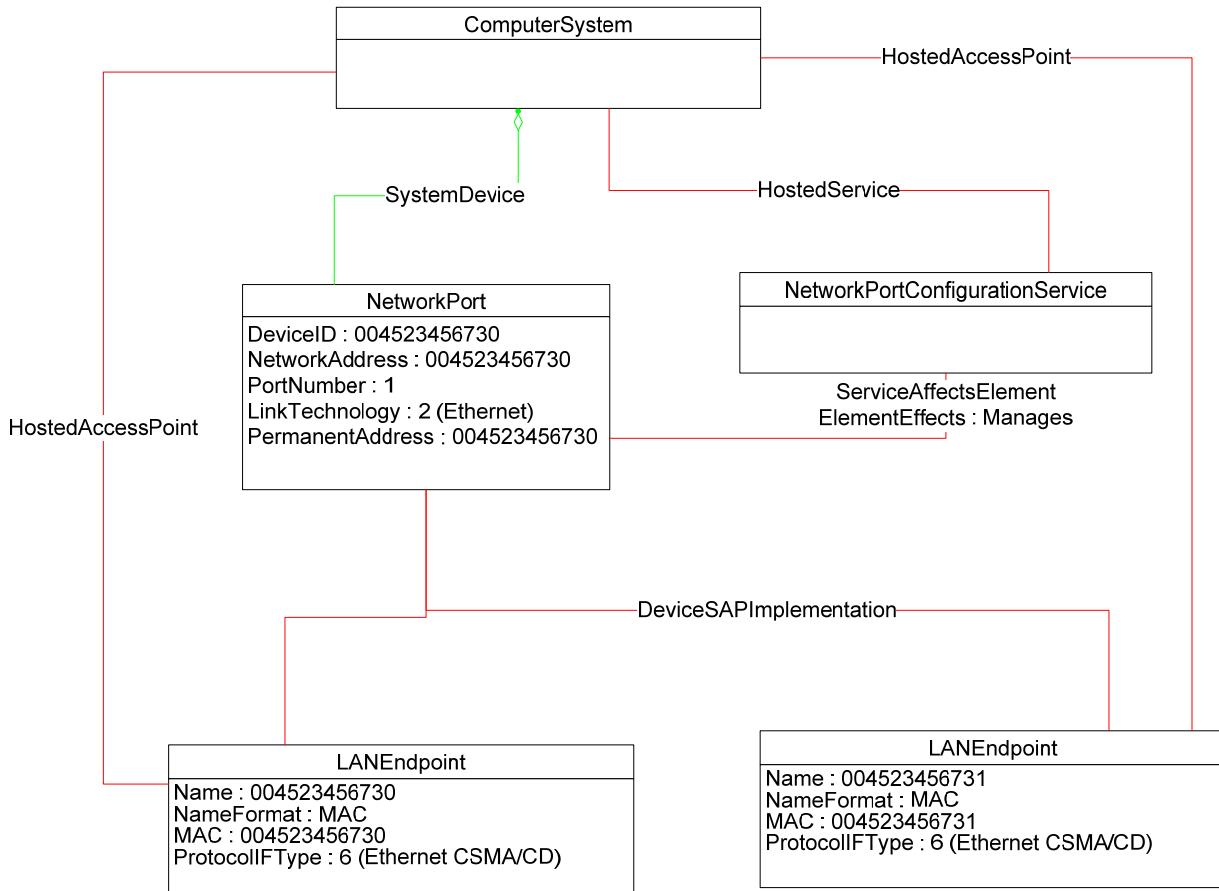

847 Figure 6 illustrates an example of a single endpoint associated with the network port. The endpoint
 848 corresponds to the real physical address burned into the network port.

849

850 **Figure 6 – Endpoint Management Supported**

851 To add an endpoint to the port in Figure 6, the client invokes the AddLANEndpoint() method and
 852 specifies a value of 004523456731 for the address parameter. Method invocation is successful, and an
 853 additional CIM_LANEndpoint is created and associated with the CIM_NetworkPort instance. This result is
 854 illustrated in Figure 7. Each endpoint is identified by its MAC address property.

855

Figure 7 – Second Endpoint Added

9.7 Determining If ElementName Can Be Modified

858 For a given instance of CIM_LANEndpoint, CIM_PortController, or CIM_NetworkPort, a client can
 859 determine whether it can modify the ElementName as follows:

- 860 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the target
 861 instance.
- 862 2) Query the value of the ElementNameEditSupported property of the
 863 CIM_EnabledLogicalElementCapabilities instance. If the value is TRUE, the client can modify
 864 the ElementName property of the target instance.

865 9.8 Determining If State Management Is Supported

866 For a given instance of CIM_LANEndpoint, CIM_PortController, or CIM_NetworkPort, a client can
 867 determine whether state management is supported as follows:

- 868 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the
 869 CIM_LANEndpoint instance.
- 870 2) Query the value of the RequestedStatesSupported property. If at least one value is specified,
 871 state management is supported.

872 10 CIM Elements

873 Table 19 shows the instances of CIM Elements for this profile. Instances of the CIM Elements shall be
 874 implemented as described in Table 19. Clauses 7 (“Implementation Requirements”) and 8 (“Methods”)
 875 may impose additional requirements on these elements.

876 **Table 19 – CIM Elements: Network Port Profile**

Element Name	Requirement	Description
Classes		
CIM_ControlledBy	Optional	See 10.1.
CIM_DeviceSAPIImplementation	Mandatory	See 10.2.
CIM_ElementCapabilities	Mandatory	See 10.3, 10.4, and 10.5.
CIM_EnabledLogicalElementCapabilities	Optional	See 10.6, 10.7, and 10.8.
CIM_HostedAccessPoint	Mandatory	See 10.9.
CIM_HostedService	Conditional	See 10.10.
CIM_LANEndpoint	Mandatory	See 10.11.
CIM_NetworkPort	Mandatory	See 10.12.
CIM_NetworkPortConfigurationService	Optional	See 10.13.
CIM_PhysicalConnector	Optional	See 10.14 .
CIM_PortController	Optional	See 10.15.
CIM_Realizes	Conditional	See 7.1.6 and 10.16.
CIM_RegisteredProfile	Mandatory	See 10.17.
CIM_ServiceAffectsElement	Conditional	See 7.3 and 10.18.
CIM_SystemDevice	Mandatory	See 10.19 and 10.20.
Indications		
None defined in this profile		

877 10.1 CIM_ControlledBy

878 CIM_ControlledBy is used to associate an instance of CIM_NetworkPort with the instance of
 879 CIM_PortController that controls the port, if the port controller is modeled. Table 20 provides information
 880 about the properties of CIM_ControlledBy.

881 **Table 20 – Class: CIM_ControlledBy**

Properties	Requirement	Description
Antecedent	Mandatory	See 7.4.2. Cardinality 0..1
Dependent	Mandatory	See 7.4.2. Cardinality 1..*

882 **10.2 CIM_DeviceSAPIImplementation**

883 CIM_DeviceSAPIImplementation is used to associate the CIM_LANEndpoint instance with the
 884 CIM_NetworkPort instance that provides the network access. Table 21 provides information about the
 885 properties of CIM_DeviceSAPIImplementation.

886 **Table 21 – Class: CIM_DeviceSAPIImplementation**

Properties	Requirement	Description
Antecedent	Mandatory	This property shall be an instance of CIM_NetworkPort. Cardinality 1..*
Dependent	Mandatory	This property shall be an instance of CIM_LANEndpoint. Cardinality 1..*

887 **10.3 CIM_ElementCapabilities — LANEndpoint**

888 CIM_ElementCapabilities is used to associate an instance of CIM_EnabledLogicalElementCapabilities
 889 with an instance of CIM_LANEndpoint. Table 22 provides information about the properties of
 890 CIM_ElementCapabilities in this context.

891 **Table 22 – Class: CIM_ElementCapabilities — LANEndpoint**

Properties	Requirement	Description
ManagedElement	Mandatory	Key This property shall be a reference to an instance of CIM_LANEndpoint. Cardinality 1..*
Capabilities	Mandatory	This property shall be a reference to the instance of CIM_EnabledLogicalElementCapabilities. Cardinality 0..1

892 **10.4 CIM_ElementCapabilities — NetworkPort**

893 CIM_ElementCapabilities is used to associate an instance of CIM_EnabledLogicalElementCapabilities
 894 with an instance of CIM_NetworkPort. Table 23 provides information about the properties of
 895 CIM_ElementCapabilities in this context.

896 **Table 23 – Class: CIM_ElementCapabilities — NetworkPort**

Properties	Requirement	Description
ManagedElement	Mandatory	This property shall be a reference to an instance of CIM_NetworkPort. Cardinality 1..*
Capabilities	Mandatory	This property shall be a reference to the instance of CIM_EnabledLogicalElementCapabilities. Cardinality 0..1

897 **10.5 CIM_ElementCapabilities — PortController**

898 CIM_ElementCapabilities is used to associate an instance of CIM_EnabledLogicalElementCapabilities
 899 with an instance of CIM_PortController. Table 24 provides information about the properties of
 900 CIM_ElementCapabilities in this context.

901 **Table 24 – Class: CIM_ElementCapabilities — PortController**

Properties	Requirement	Description
ManagedElement	Mandatory	This property shall be a reference to an instance of CIM_PortController. Cardinality 1..*
Capabilities	Mandatory	This property shall be a reference to the instance of CIM_EnabledLogicalElementCapabilities. Cardinality 0..1

902 **10.6 CIM_EnabledLogicalElementCapabilities — LANEndpoint**

903 CIM_EnabledLogicalElementCapabilities is used to indicate support for managing the state of the network
 904 interface. Table 25 provides information about the properties of CIM_EnabledLogicalElementCapabilities
 905 in this context.

906 **Table 25 – Class: CIM_EnabledLogicalElementCapabilities — LANEndpoint**

Properties	Requirement	Description
InstanceID	Mandatory	None
RequestedStatesSupported	Mandatory	See 7.2.4.1.1 and 7.2.5.1.1.
ElementNameEditSupported	Mandatory	See 7.2.6.1.1 and 7.2.7.1.1.
MaxElementNameLen	Conditional	See 7.2.6.1.2 and 7.2.7.1.2.

907 **10.7 CIM_EnabledLogicalElementCapabilities — NetworkPort**

908 CIM_EnabledLogicalElementCapabilities is used to indicate support for managing the state of the network
 909 port. Table 26 provides information about the properties of CIM_EnabledLogicalElementCapabilities in
 910 this context.

911 **Table 26 – Class: CIM_EnabledLogicalElementCapabilities — NetworkPort**

Properties	Requirement	Description
InstanceID	Mandatory	None
RequestedStatesSupported	Mandatory	See 7.1.2.1.1 and 7.1.3.1.1.
ElementNameEditSupported	Mandatory	See 7.1.4.1.1 and 7.1.5.1.1.
MaxElementNameLen	Conditional	See 7.1.4.1.2 and 7.1.5.1.2.

912 **10.8 CIM_EnabledLogicalElementCapabilities — PortController**

913 CIM_EnabledLogicalElementCapabilities is used to indicate support for managing the state of the port
 914 controller. Table 27 provides information about the properties of CIM_EnabledLogicalElementCapabilities
 915 in this context.

916 **Table 27 – Class: CIM_EnabledLogicalElementCapabilities — PortController**

Properties	Requirement	Description
InstanceID	Mandatory	None
RequestedStatesSupported	Mandatory	See 7.4.3.1.1 and 7.4.4.1.1.
ElementNameEditSupported	Mandatory	See 7.4.5.1.1 and 7.4.6.1.1.
MaxElementNameLen	Conditional	See 7.4.5.1.2 and 7.4.6.1.2.

917 **10.9 CIM_HostedAccessPoint**

918 CIM_HostedAccessPoint is used to relate a CIM_LANEndpoint instance to its scoping
 919 CIM_ComputerSystem instance. Table 28 provides information about the properties of
 920 CIM_HostedAccessPoint.

921 **Table 28 – Class: CIM_HostedAccessPoint**

Properties	Requirement	Description
Antecedent	Mandatory	This property shall be a reference to the Scoping Instance. Cardinality 1
Dependent	Mandatory	This property shall be a reference to an instance of CIM_LANEndpoint. Cardinality 1..*

922 **10.10 CIM_HostedService**

923 CIM_HostedService is used to associate the CIM_NetworkPortConfigurationService instance with the
 924 CIM_ComputerSystem instance to which it is scoped. Table 29 provides information about the properties
 925 of CIM_HostedService.

926 **Table 29 – Class: CIM_HostedService**

Properties	Requirement	Description
Antecedent	Mandatory	This property shall be a reference to the Scoping Instance. Cardinality 1
Dependent	Mandatory	This property shall be a reference to CIM_NetworkPortConfigurationService. Cardinality *

927 **10.11 CIM_LANEndpoint**

928 CIM_LANEndpoint represents a MAC address to which the network port will respond on the LAN. Table
929 30 provides information about the properties of CIM_LANEndpoint.

930 **Table 30 – Class: CIM_LANEndpoint**

Properties and Methods	Requirement	Description
SystemCreationClassName	Mandatory	None
CreationClassName	Mandatory	None
SystemName	Mandatory	None
Name	Mandatory	None
NameFormat	Mandatory	None
ProtocolIFTType	Mandatory	None
MACAddress	Mandatory	None
LANID	Optional	See 8.1.
AliasAddresses	Optional	See 8.1.
GroupAddresses	Optional	See 8.1.
RequestedState	Mandatory	See 7.2.4.2 and 7.2.5.2.
EnabledState	Mandatory	See 7.2.5.3 and 7.2.4.3.
ElementName	Mandatory	See 7.2.6 and 7.2.7.
RequestStateChange()	Conditional	See 8.3.

931 **10.12 CIM_NetworkPort**

932 CIM_NetworkPort represents the hardware and device aspects of a physical network interface. Table 31
933 provides information about the properties of CIM_NetworkPort.

934 **Table 31 – Class: CIM_NetworkPort**

Properties and Methods	Requirement	Description
SystemCreationClassName	Mandatory	None
CreationClassName	Mandatory	None
SystemName	Mandatory	None
Name	Mandatory	None
Speed	Optional	A value of 0 (zero) shall indicate that the actual value is unknown.
LinkTechnology	Mandatory	None
PermanentAddress	Mandatory	This property shall be a character string of length 0 to 64. pattern.{0,64}
MaxSpeed	Optional	A value of 0 (zero) shall indicate that the actual value is unknown.
RequestedSpeed	Optional	A value of 0 (zero) shall indicate that the actual value is unknown.
DeviceID	Mandatory	None
EnabledState	Mandatory	See 7.1.2.3 and 7.1.3.3.
RequestedState	Mandatory	See 7.1.2.2 and 7.1.3.2.
ElementName	Mandatory	See 7.1.4 and 7.1.5.
RequestStateChange()	Conditional	See 8.2.

935 **10.13 CIM_NetworkPortConfigurationService**

936 CIM_NetworkPortConfigurationService represents the ability to add endpoints to the network port. Table
 937 32 provides information about the properties of CIM_NetworkPortConfigurationService.

938 **Table 32 – Class: NetworkPortConfigurationService**

Properties and Methods	Requirement	Description
SystemCreationClassName	Mandatory	None
CreationClassName	Mandatory	None
SystemName	Mandatory	None
Name	Mandatory	None
ElementName	Mandatory	This property shall be formatted as a free-form string of variable length. (pattern “*”)
AddLANEndpoint()	Mandatory	See 8.1.

939 **10.14 CIM_PhysicalConnector**

940 CIM_PhysicalConnector is used to represent the physical connector that connects the network port to the
 941 physical network. This class is defined by the [Physical Asset Profile](#). The behavior specified in Table 33 is
 942 in addition to that specified by the [Physical Asset Profile](#).

943 **Table 33 – Class: CIM_PhysicalConnector**

Properties	Requirement	Description
ConnectorLayout	Mandatory	None

944 **10.15 CIM_PortController**

945 CIM_PortController represents a network controller. Table 34 provides information about the properties of
 946 CIM_PortController.

947 **Table 34 – Class: CIM_PortController**

Properties	Requirement	Description
ControllerType	Mandatory	None
ProtocolSupported	Mandatory	None
MaxNumberControlled	Mandatory	A value of 0 (zero) shall indicate that the actual value is unknown.
SystemCreationClassName	Mandatory	None
SystemName	Mandatory	None
CreationClassName	Mandatory	None
Name	Mandatory	None
DeviceID	Mandatory	None
EnabledState	Mandatory	See 7.4.3.3.
RequestedState	Mandatory	See 7.4.3.2.
ElementName	Mandatory	See 7.4.5 and 7.4.6.
RequestStateChange()	Conditional	See 8.4.

948 **10.16 CIM_Realizes**

949 The CIM_Realizes association is used to associate the CIM_NetworkPort with an instance of
 950 CIM_PhysicalConnector when an instance of CIM_PhysicalConnector is instrumented. This class is
 951 defined by the [Physical Asset Profile](#). The behavior specified in Table 35 is in addition to that specified by
 952 the [Physical Asset Profile](#).

953 **Table 35 – Class: CIM_Realizes**

Properties	Requirement	Description
Antecedent	Mandatory	This property shall be a reference to CIM_PhysicalConnector. Cardinality 0..1
Dependent	Mandatory	This property shall be a reference to the Central Instance. Cardinality 1..*

954 **10.17 CIM_RegisteredProfile**

955 CIM_RegisteredProfile identifies the *Host LAN Network Port Profile* in order for a client to determine
 956 whether an instance of CIM_LogicalModule is conformant with this profile. The CIM_RegisteredProfile
 957 class is defined by the [Profile Registration Profile](#). With the exception of the mandatory values specified
 958 for the properties in Table 36, the behavior of the CIM_RegisteredProfile instance is in accordance with
 959 the constraints specified in the [Profile Registration Profile](#).

960 **Table 36 – Class: CIM_RegisteredProfile**

Properties	Requirement	Description
RegisteredName	Mandatory	This property shall have a value of "Host LAN Network Port".
RegisteredVersion	Mandatory	This property shall have a value of "1.0.1".
RegisteredOrganization	Mandatory	This property shall have a value of "DMTF".

961 NOTE: Previous versions of this document included the suffix "Profile" for the RegisteredName value. If
 962 implementations querying for the RegisteredName value find the suffix "Profile", they should ignore the suffix, with
 963 any surrounding white spaces, before any comparison is done with the value as specified in this document.

964 **10.18 CIM_ServiceAffectsElement**

965 CIM_ServiceAffectsElement is used to associate an instance of CIM_NetworkPortConfigurationService
 966 with an instance of CIM_NetworkPort that the service is able to configure. Table 37 provides information
 967 about the properties of CIM_ServiceAffectsElement.

968 **Table 37 – Class: CIM_ServiceAffectsElement**

Properties	Requirement	Description
AffectingElement	Mandatory	This property shall be a reference to the instance of CIM_NetworkPortConfigurationService. Cardinality *
AffectedElement	Mandatory	This property shall be a reference to an instance of CIM_NetworkPort. Cardinality 1..*
ElementAffects	Mandatory	Matches 5 (Manages)

969 **10.19 CIM_SystemDevice — CIM_NetworkPort**

970 CIM_SystemDevice is used to associate an instance of CIM_NetworkPort with the instance of
 971 CIM_ComputerSystem to which the CIM_NetworkPort is scoped. Table 38 provides information about the
 972 properties of CIM_SystemDevice.

973 **Table 38 – Class: CIM_SystemDevice**

Properties	Requirement	Description
GroupComponent	Mandatory	This property shall be a reference to an instance of CIM_ComputerSystem. Cardinality 1
PartComponent	Mandatory	This property shall be a reference to CIM_NetworkPort. Cardinality 1..*

974 10.20 CIM_SystemDevice — CIM_PortController

975 CIM_SystemDevice is used to associate an instance of CIM_PortController with an instance of
976 CIM_ComputerSystem when CIM_PortController is implemented. Table 39 provides information about the
977 properties of CIM_SystemDevice.

978 **Table 39 – Class: CIM_SystemDevice**

Properties	Requirement	Description
GroupComponent	Mandatory	This property shall be a reference to an instance of CIM_ComputerSystem. Cardinality 1
PartComponent	Mandatory	This property shall be a reference to CIM_PortController. Cardinality *
