190	Introduction
191 192 193 194	The information in this specification is intended to be sufficient for a provider or consumer of this data to identify unambiguously the classes, properties, methods, and values that are mandatory to be instantiated and manipulated to represent and manage users and groups that are modeled using the DMTF Common Information Model (CIM) core and extended model definitions.
195 196	The target audience for this specification is implementers who are writing CIM-based providers or consumers of management interfaces that represent the component described in this document.
197	Document conventions
198	Typographical conventions
199	The following typographical conventions are used in this document:
200	Document titles are marked in <i>italics</i> .
201	 Important terms that are used for the first time are marked in italics.
202	ABNF rules are in monospaced font.
203	ABNF usage conventions
204 205	Format definitions in this document are specified using ABNF (see <u>RFC5234</u>), with the following deviations:
206 207	 Literal strings are to be interpreted as case-sensitive Unicode characters, as opposed to the definition in <u>RFC5234</u> that interprets literal strings as case-insensitive US-ASCII characters.

243

are defined in this clause.

208 Certificate Management Profile

209	1 Scope
210 211 212 213 214 215	The Certificate Management Profile specializes the Credential Management Profile and extends the management capability of the referencing profiles by adding the capability to model and manage X509 certificates of the public key infrastructure (PKI). This profile is not intended to serve as a mechanism for the digital identification. Creation, storage, and management of X509 certificates, public private key pairs, certificate revocation lists (CRL) and certificate signing requests (CSR) is detailed. Profile registration for the schema implementation version information is also described.
216	2 Normative references
217 218 219 220	The following referenced documents are indispensable for the application of this document. For dated or versioned references, only the edition cited (including any corrigenda or DMTF update versions) applies. For references without a date or version, the latest published edition of the referenced document (including any corrigenda or DMTF update versions) applies.

241	3 Terms and definitions

In this document, some terms have a specific meaning beyond the normal English meaning. Those terms

- The terms "shall" ("required"), "shall not," "should" ("recommended"), "should not" ("not recommended"),
- 245 "may," "need not" ("not required"), "can" and "cannot" in this document are to be interpreted as described
- in ISO/IEC Directives, Part 2, Annex H. The terms in parenthesis are alternatives for the preceding term,
- for use in exceptional cases when the preceding term cannot be used for linguistic reasons. Note that
- 248 ISO/IEC Directives, Part 2, Annex H specifies additional alternatives. Occurrences of such additional
- 249 alternatives shall be interpreted in their normal English meaning.
- The terms "clause," "subclause," "paragraph," and "annex" in this document are to be interpreted as
- described in ISO/IEC Directives, Part 2, Clause 5.
- The terms "normative" and "informative" in this document are to be interpreted as described in ISO/IEC
- 253 Directives, Part 2, Clause 3. In this document, clauses, subclauses, or annexes labeled "(informative)" do
- not contain normative content. Notes and examples are always informative elements.
- 255 The terms defined in <u>DSP0004</u>, <u>DSP0200</u>, and <u>DSP1001</u> apply to this document. The following additional
- 256 terms are used in this document.
- 257 **3.1**
- 258 Asymmetric Key Pair
- 259 public/private key pair represented by CIM_UnsignedCredential
- 260 **3.2**
- 261 Container Keystore
- the single instance of CIM_Keystore that contains a given PKI Credential Instance
- 263 The instance of CIM_Keystore is associated to the PKI Credential Instance through the
- 264 CIM MemberOfCollection association.
- 265 **3.3**
- 266 Managing Service
- The instance of CIM_CertificateManagementService that is managing a given PKI Credential Instance
- 268 The instance of CIM_CertificateManagementService is associated to the Container Keystore of the given
- 269 PKI Credential Instance through the CIM_ServiceAffectsElement association.
- 270 **3.4**
- 271 PKI Credential Instance
- an instance of CIM_UnsignedCredential, CIM_X509Certificate, or CIM_X509CRL representing a PKI
- 273 credential

274 4 Symbols and abbreviated terms

- The abbreviations defined in <u>DSP0004</u>, <u>DSP0200</u>, and <u>DSP1001</u> apply to this document. The following
- additional abbreviations are used in this document.
- **277 3.5**
- 278 CRL
- 279 Certification Revocation List
- 280 **3.6**
- 281 **CSR**
- 282 Certificate Signing Request
- 283 **3.7**
- 284 **PKI**
- 285 Public Key Infrastructure

DSP1096

Synopsis

- 287 **Profile Name:** Certificate Management
- 288 Version: 1.0.0

286

- 289 **Organization: DMTF**
- 290 CIM schema version: 2.29
- 291 Central Class: CIM CertificateManagementService
- 292 Scoping Class: CIM_System
- 293 The Certificate Management Profile specializes the Credential Management Profile to extend the
- 294 management capability of the referencing profiles by adding the capability to represent and manage X509
- 295 certificates.
- 296 The Central Class of the Certificate Management Profile shall be CIM CertificateManagementService.
- The Central Instance shall be an instance of CIM_CertificateManagementService. The Scoping Class 297
- shall be CIM_System. The Scoping Instance shall be the instance of CIM_System that is associated with 298
- 299 the Central Instance through the CIM HostedService association.
- 300 Table 1 lists the profiles related to the Certificate Management Profile.

301 Table 1 – Referenced profiles

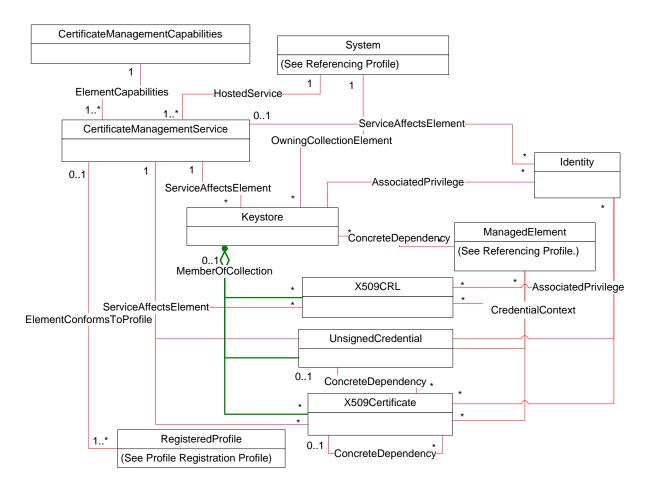

Profile Name	Organization	Version	Relationship	Behavior
Credential Management	DMTF	1.0	Specializes	
Profile Registration	DMTF	1.0	Mandatory	

Description

- The Certificate Management Profile describes the properties and methods for X509 certificate 303 management in a managed system. This profile does not provide a mechanism for an application to 304 305
- authenticate using certificates but rather to manage the certificates that are used by the managed system
- for the authentication. 306

302

- 307 Figure 1 represents the class schema for the profile. For simplicity, the prefix CIM has been removed
- 308 from the names of the classes.

326

Figure 1 - Certificate Management Profile: Class diagram

The Certificate Management Profile consists of the representation of X509 certificate management services using CIM_CertificateManagementService, key stores accumulating PKI-based credentials using CIM_Keystore, and the PKI based credentials using CIM_UnsignedCredential, CIM_X509CRL, and CIM_X509Certificate.

6.1 Key store

Key store aggregates the PKI-based credentials used by the managed system's services. There are two usage scenarios predominant with key stores:

- Another entity connects with the managed system service and presents its digital identification for the managed system's service to verify. To verify the connected entity's identification, the managed system service looks up a key store for a matching trusted certificate to verify against. In this case, the key store is identified as a trusted key store.
- 2) The managed system's service connects to an entity where the connected entity requires the managed system's service to present its digital identification. The managed system service's digital identification is stored in the key store identified as an owned key store.

For example:

DSP1096

329

330 331

- 327 1) A web service running on the managed system utilizes the owned key store for the X509 certificate that is presented to the connecting web client.
 - 2) LDAP client services on the managed system utilize the trusted key store to store trusted X509 certificates to verify against the certificate presented by the LDAP server, which the managed system connects to in the process of authentication.
- Both the owned key store and the trusted key store are represented by the CIM_Keystore class which is associated to the CIM_ManagedElement class representing the service that utilizes the credential store by the CIM_ConcreteDependency association.

335 6.2 Public key infrastructure

- 336 Public key infrastructure is used by the managed system for establishing trust. The credentials used in
- public key infrastructure are represented by the classes derived from the CIM_Credential class, such as
- 338 CIM_UnsignedCredential, CIM_X509Certificate, and CIM_X509CRL.

339 6.2.1 Asymmetric key pair

- 340 Asymmetric key pair on a managed system is represented by CIM_UnsignedCredential. The asymmetric
- key pair can be used as an input for generating a Certificate Signing Request or a self-signed certificate
- 342 through the methods in the CIM_CertificateManagementService. CIM_CertificateManagementService
- also contains an extrinsic method for importing an asymmetric key pair.

344 **6.2.2 X.509 certificate**

- 345 X.509 certificate is represented by the CIM_X509Certificate class. CIM_X509Certificate contains
- properties corresponding to the X.509 certificate fields defined in RFC3280.
- 347 If the X.509 certificate was generated using imported asymmetric key, then the CIM UnsignedCredential
- 348 instance representing the asymmetric key is associated to the CIM_X509Certifacte instance representing
- the generated X.509 certificate through CIM_ConcreteDependency association, where the Antecedent
- 350 property references the CIM_UnsignedCredential instance and the Dependent property references the
- 351 CIM_X509Certificate instance.
- 352 If the managed element that uses X.509 certificate for authentication is represented by a subclass of
- 353 CIM ManagedElement, this instance of the subclass of CIM ManagedElement will be associated with the
- 354 CIM_X509Certificate instance using the CIM_CredentialContext association or will be associated with the
- 355 CIM_Keystore instance aggregating the CIM_X509Certificate instance using the
- 356 CIM_ConcreteDependency association. Thus, CIM_ConcreteDependency and CIM_CredentialContext
- 357 represent the usage of the credentials.
- 358 Certificate chains are also represented by the CIM_ConcreteDependency class associating the
- 359 CIM_X509Certificate instances representing the signer and signed certificates.
- 360 CIM_CertificateManagementService contains methods for creating, importing, and exporting certificates.

361 6.2.3 X.509 certificate revocation list (CRL)

- 362 X.509 CRL is represented by CIM_X509CRL class. CIM_X509CRL contains properties corresponding to
- 363 the X.509 CRL fields defined in RFC3280. CIM CertificateManagementService contains a method for
- applying the encoded X.509 CRL received from the Certificate Authority onto a specific key store.

6.3 Authorization

365

- 366 X.509 certificates and keys may have different levels of access authorization. An authorized entity is
- 367 represented by a security principal through the CIM_Identity class. A security principal may be authorized
- 368 to access the credential store or a particular credential within a key store. The AssociatedPrivilege

- association contains the privileges of the security principal as well as references to the key store, the certificate/key, or both.
- When an implementation has the ability to authorize on both levels (per key store and per the
- certificate/key), the implementation calculates the effective authorization privileges for a particular security principal by combining the key stores and its members' privileges in one of the following ways:
- 374 1) Collection Privileges Override The effective privileges are the key store privileges overriding a particular certificate/key's privileges.
 - Member Privileges Override The effective credential privileges are the particular certificate/key privileges overriding the key store's privileges.
 - 3) Collection-Member Privileges Union The effective credential privilege is the union of the key store privileges and the particular certificate/key privileges.
 - 4) Collection-Member Privileges Intersection The effective credential privilege is the intersection of the key store privileges and the particular certificate/key privileges.
- The implementation supporting the key store level and member level privileges will implement one of the
- above methodologies for calculating the effective privilege for a key/certificate. The
- 384 CertificateManagementCapabilities class will advertise which of these methodologies the implementation
- 385 supports.

377

378

379380

381

386

395

402

7 Implementation

- 387 This clause details the requirements related to the arrangement of instances and their properties for
- 388 implementations of this profile.

389 **7.1 Key store**

- 390 The requirements for the instances of CIM_Keystore and PKI Credential Instances are defined in the
- 391 Credential Management Profile.

392 7.2 Certificate management service

- 393 This subclause details the requirements for the certificate management service and the representation of
- 394 its capabilities.

7.2.1 CIM_CertificateManagementService

- 396 Each PKI-based credential represented by a PKI Credential Instance shall be managed by one and only
- 397 one certificate management service represented by an instance of CIM_CertificateManagementService,
- also referred to as a Managing Service (see 3.3). Each Container Keystore shall be associated to an
- 399 instance of CIM_CertificateManagementService. The PKI Credential Instances within the Container
- 400 Credential Store shall be managed by the CIM_CertificateManagementService instance, which the
- 401 Container Keystore is associated through CIM_ServiceAffectsElement.

7.2.2 CIM_CertificateManagementCapabilities

- There shall be one and only one instance of CIM_CertificateMangementCapabilities associated with an
- 404 instance of CIM CertificateManagementService representing the capabilities of a certificate management
- 405 service.
- 406 If the AsymmetricKeyGeneration property is TRUE, then the KeyAlgorithmSupportedProperty shall have a
- 407 non empty, non-NULL value.

421

431

- 408 If the SupportedMethods array property contains a value of 103 (ImportEncodedCertificates) or 106
- (ApplyCRL), then the InputFormatsSupported array property shall have a non empty, non-NULL value.
- 410 If the SupportedMethods array property contains a value of 105 (ExportEncodedCertificate), then the
- 411 OutputFormatsSupported array property shall have a non empty, non-NULL value.

7.3 Certificate chain

- 413 Certificate chains may be represented. If the complete chain of certificates is implemented, the
- 414 requirements in this subclause shall apply.
- 415 Each certificate in the certificate chain shall be represented by an instance of CIM_X509Certificate. The
- 416 instance of CIM X509Certificate representing the signing certificate shall be associated with instances of
- 417 CIM_X509Certificate that represent the signed certificates using CIM_ConcreteDependency, where the
- 418 Antecedent property shall reference the instance of CIM_X509Certificate representing the signing
- 419 certificate and the Dependent property shall reference the instance of CIM_X509Certificate representing
- 420 the signed certificate.

7.4 Authorization

- 422 This subclause details the requirements that are in addition to the authorization requirements in the
- 423 Credential Management Profile.
- 424 If the security principal authorization is implemented, then the CIM_Identity instance representing the
- security principal shall be associated with a CIM_KeyStore instance or PKI Credential Instance through
- 426 the CIM_AssociatedPrivilege association.
- For the CIM_Keystore instance referenced by CIM_AssociatedPrivilege, the referenced CIM_Identity shall
- 428 be authorized to perform the intrinsic operations or execute extrinsic methods in the "Intrinsic Operations"
- 429 and "Extrinsic Methods" columns of Table 2, if and only if the CIM_AssociatedPrivilege.Activities property
- contains the value from the "CIM_AssociatedPrivilege.Activities" column of the respective row of Table 2.

Table 2 – CIM AssociatedPrivilege.Activities mapping to PKI Credential Instance operations

CIM_AssociatedPrivilege. Activities	Credential Operation	Intrinsic Operations	Extrinsic Methods
2 (Create) or 6 (Write)	Import a key/certificate into a key store	Modify Instance on PKI Credential Instance	ImportPublicPrivateKeyPair()
			CreateCertificateSigningRequest()
			CreateSelfSignedCertificate()
			ImportEncodedCertificates()
			ImportCertificates()
			ApplyCRL()
			ApplyDecodedCRL()
5 (Read)	Export a key/certificate	Get on PKI Credential Instance	ExportEncodedCertificates()
	from a key store	Enumerate on PKI Credential Instance	
3 (Delete)	Delete a key/certificate from a key store	Delete on PKI Credential Instance	

- 432 For the PKI Credential Instance referenced by CIM_AssociatedPrivilege, the referenced CIM_Identity
- 433 shall be authorized to perform the intrinsic operations or execute extrinsic methods in the "Intrinsic
- 434 Operations" and "Extrinsic Methods" columns of Table 3, if and only if the
- 435 CIM_AssociatedPrivilege.Activities property contains the value from "CIM_AssociatedPrivilege.Activities"
- 436 column of the respective row of Table 3.

Table 3 – CIM_AssociatedPrivilege.Activities mapping to PKI Credential Instance operations

CIM_AssociatedPrivilege. Activities	Credential Operation	Intrinsic Operations	Extrinsic Methods
6 (Write)	Modify a key or certificate	Modify Instance on PKI Credential Instance	
5 (Read)	Get a key or certificate	Get on PKI Credential Instance Enumerate on PKI	ExportEncodedCertificates()
		Credential Instance	
3 (Delete)	Delete a key or certificate	Delete on PKI Credential Instance	

8 Methods

This clause details the requirements for supporting intrinsic operations and extrinsic methods for the CIM elements defined by this profile.

8.1 CIM_CertificateManagementService.ImportPublicPrivateKeyPair()

- The ImportPublicPrivateKeyPair() method provides the ability to import a public/private key pair to be used by the managed system.
- The ImportPublicPrivateKeyPair() method's return code values shall be as specified in Table 4, where the method execution behavior matches the return code description. The ImportPublicPrivateKeyPair()
- 446 method's parameters are specified in

447 448

451

452

438

441

437

449 Table 5.

450 No standard messages are defined for this method.

Table 4 – CIM_CertificateManagementService.ImportPublicPrivateKeyPair() method: Return code values

Value	Description
0	Operation completed successfully
1	Operation unsupported
2	Failed
4096	Job created – only Job output parameter shall be returned.

453

456

Table 5 – CIM_CertificateManagementService.ImportPublicPrivateKeyPair() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN, REQ, OctetString	PublicKey[]	string	Public key as an octet string array of one element.
			The public key shall be contained in the first element of the array. All other array element shall be ignored.
IN, REQ, OctetString	PrivateKey[]	string	Private key as an octet string array of one element.
			The private key shall be contained in the first element of the array. All other array element shall be ignored.
IN, REQ	Keystore	CIM_Keystore REF	References the key store to which the asymmetric key is to be added
IN	CredentialContext	CIM_ManagedElement REF	References an instance of CIM_ManagedElement that will utilize the imported credential
IN	Usage[]	uint16	Describes how the managed element, referenced by the CredentialContext parameter, utilizes the imported credential
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob created to track the execution initiated by the method invocation.
OUT, REQ	PPKPCredential	CIM_UnsignedCredential REF	References the instance representing the imported public/private key pair.

8.1.1 CIM_CertificateManagementService.ImportPublicPrivateKeyPair() conditional support

- 459 If the SupportedMethods property array of the associated instance of
- 460 CIM_CertificateManagementCapabilities contains the value 2 (ImportPublicPrivateKeyPair), the
- 461 ImportPublicPrivateKeyPair() method shall be implemented and shall not return the value 1 (Not
- 462 Supported).

457

458

467

- 463 If the SupportedMethods property array of the associated instance of
- 464 CIM CertificateManagementCapabilities does not contain the value 2 (ImportPublicPrivateKeyPair), the
- ImportPublicPrivateKeyPair() method shall not be implemented or shall always return the value 1 (Not
- 466 Supported).

8.1.2 Parameter validation

- 468 If the Usage parameter has a non-NULL value, then the CredentialContext parameter shall have a non-
- 469 NULL value. If the Usage parameter has non-NULL value and the CredentialContext parameter is NULL,
- 470 then the method shall return 2 (Failed).

8.1.3 Required privileges

- 472 The method invocation shall fail if the Activities property of the CIM_AssociatedPrivilege instance,
- 473 referencing the CIM_Identity instance representing the executor's security principal, does not contain the
- 474 value 2 (Create) or 6 (Write).

8.2 CIM_CertificateManagementService.CreateKeystore()

- The CreateKeystore() method provides the ability to create new key stores.
- 477 The CreateKeystore() method's return code values shall be as specified in Table 6 where the method
- 478 execution behavior matches the return code description. The CreateKeystore() method's parameters are
- 479 specified in Table 7.

471

475

481

482

483

480 No standard messages are defined for this method.

Table 6 - CIM_CertificateManagementService.CreateKeystore() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

Table 7 - CIM_CertificateManagementService.CreateKeystore() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN, REQ	Keystore	String	Embedded instance representing the new key store
IN, REQ	OwningSystem	CIM_System REF	Reference to the owning managed system for the key store
IN	KeystoreUtilizers[]	CIM_ManagedElement REF	Array of references to the CIM_ManagedElement subclass instances that will utilize the new key store
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob created to track the execution initiated by the method invocation
OUT, REQ	Keystore	CIM_Keystore REF	Reference to the newly created CIM_Keystore instance representing the new key store

8.2.1 CIM_CertificateManagementService.CreateKeystore() conditional support

- 484 If the SupportedMethods property array of the associated instance of
- 485 CIM CertificateManagementCapabilities contains the value 3 (CreateKeystore), the CreateKeystore()
- method shall be implemented and shall not return the value 1 (Not Supported).
- 487 If the SupportedMethods property array of the associated instance of
- 488 CIM_CertificateManagementCapabilities does not contain the value 3 (CreateKeystore), the
- CreateKeystore() method shall not be implemented or shall always return the value 1 (Not Supported).

501 502

503

504

8.2.2 Parameter validation

- The Keystore parameter shall have non-NULL values for the Usage property of the CIM_Keystore
- 492 embedded instance. If the Usage property of the CIM_Keystore embedded instance of the Keystore
- 493 parameter is NULL or is missing, the method shall return a value of 2 (Failed).

494 8.3 CIM_CertificateManagementService.CreateCertificateSigningRequest()

- The CreateCertificateSigningRequest() method provides the ability to create CSRs based on PKCS#10 referenced in RFC2986.
- 497 The CreateCertificateSigningRequest() method's return code values shall be as specified in Table 8,
- where the method execution behavior matches the return code description. The
- 499 CreateCertificateSigningRequest() method's parameters are specified in Table 9.
- No standard messages are defined for this method.

Table 8 – CIM_CertificateManagementService.CreateCertificateSigningRequest() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

Table 9 – CIM_CertificateManagementService.CreateCertificateSigningRequest() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN	Subject	string	Subject shall contain information as required by section 4.1.2.4 of RFC3280, formatted based on RFC4514.
IN	AltSubject	string	String containing alternate subject identifier
IN	PublicKeyAlgorithm	uint16	The algorithm used for generating the public/private key pair. This parameter shall be supported if the AsymmetricKeyGeneration property of the associated CIM_CertificateManagementCapabilities instance is TRUE.
IN	PublicKeySize	uint16	The length of the public key. This parameter shall be supported if the AsymmetricKeyGeneration property of the associated CIM_CertificateManagementCapabilities is TRUE and if the PublicPrivateKeyPair is not specified.
IN	PublicPrivateKeyPair	CIM_UnsignedCredential REF	Reference to the instance of CIM_UnsignedCredential representing the public/private key pair

Qualifiers	Name	Туре	Description/Values
IN	ExtendedKeyUsageValue[]	string	Indicates one or more purposes for which the certified public key may be used. The value at each index describes the key usage value based on the type at the corresponding index of ExtendedKeyUsageType[] parameter array.
IN	ExtendedKeyUsageType[]	uint16	Indicates the type for ExtendedKeyUsageValue based on the ASN.1 GeneralName types. The value at each index describes the type for ExtendedKeyUsageValue parameter at the corresponding index.
IN	SignatureAlgorithm	uint16	Indicates the signature algorithm used to sign the CSR
IN, REQ	OutputFormat	uint16	Indicates the output format of the CSR
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob created to track the execution initiated by the method invocation.
OUT, REQ,	CSR[]	string	CSR as a single-element octet string array.
OctetString			The entire CSR shall be contained in the first array element. All other array elements shall be ignored, if present.

8.3.1 CIM_CertificateManagementService.CreateCertificateSigningRequest() conditional support

- 507 If the SupportedMethods property array of the associated instance of
- 508 CIM CertificateManagementCapabilities contains the value 101 (CreateCertificateSigningRequest), the
- 509 CreateCertificateSigningRequest() method shall be implemented and shall not return the value 1 (Not
- 510 Supported).

505

506

515

- 511 If the SupportedMethods property array of the associated instance of
- 512 CIM CertificateManagementCapabilities does not contain the value
- 513 101 (CreateCertificateSigningRequest), the CreateCertificateSigningRequest() method shall not be
- 514 implemented or shall always return the value 1 (Not Supported).

8.3.2 Parameter validation

- 516 If the PublicPrivateKeyPair parameter is NULL and the AsymmetricKeyGeneration property of the
- 517 associated instance of CIM_CertificateManagementCapabilities has the value FALSE, then the method
- 518 shall return a value of 2 (Failed).
- If the PublicPrivateKeyPair parameter is NULL and the PublicKeyAlgorithm or PublicKeySize parameters
- are NULL, then the method shall return a value of 2 (Failed).
- 521 If the PublicKeyAlgorithm parameter is not NULL and the KeyAlgorithmSupported array property of the
- 522 associated instance of CIM CertificateManagementCapabilities does not contain the value of the
- 523 PublicKeyAlgorithm parameter, then the method shall return a value of 2 (Failed).
- If the Subject and AltSubject parameters are both NULL, then the method shall return a value of 2
- 525 (Failed).

- 526 If the OutputFormat parameter does not contain a value specified in the SupportedOutputFormats
- 527 property array of the associated CIM CertificateManagementCapabilities instance, then the method shall
- 528 return a value 2 (Failed).
- 529 If the CIM_CertificateManagementCapabilities.SupportedSignatureAlgorithms property is implemented
- and the SignatureAlgorithm parameter does not contain a value specified in the
- 531 SupportedSignatureAlgorithms property array, then the method shall return a value 2 (Failed).

8.3.3 Required privileges

- 533 The method invocation shall fail if the Activities property of the CIM AssociatedPrivilege instance,
- referencing the CIM_Identity instance representing the executor's security principal, does not contain a
- value of 2 (Create) or 6 (Write).

536 8.4 CIM_CertificateManagementService.CreateSelfSignedCertificate()

- 537 The CreateSelfSignedCertificate() method provides the ability to create an X509 self-signed certificate
- either based on the pre-generated public-private key pair or based on the method execution generated
- 539 public private key-pair.
- 540 The CreateSelfSignedCertificate() method's return code values shall be as specified in Table 10 where
- the method execution behavior matches the return code description. The CreateSelfSignedCertificate()
- method's parameters are specified in Table 11.
- 543 If the pre-generated public-private key pair is used by providing a valid PublicPrivateKeyPair parameter,
- then the generated X.509 certificate in the SelfSignedCertificate output parameter shall reference the
- 545 CIM_UnsignedCredential instance representing the PublicPrivateKeyPair through
- 546 CIM ConreteDependency association, where the Antecedent property references the
- 547 CIM_UnsignedCredential instance and the Dependent property references the CIM_X509Certificate
- 548 instance.
- No standard messages are defined for this method.

550 Table 10 - CIM_CertificateManagementService.CreateSelfSignedCertificate() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

552 Table 11 - CIM_CertificateManagementService.CreateSelfSignedCertificate() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN	Subject	string	Subject shall contain information as required by section 4.1.2.4 of RFC3280, formatted based on RFC4514
IN	AltSubject	string	String containing alternate subject identifier

Qualifiers	Name	Туре	Description/Values
IN	PublicKeyAlgorithm	uint16	The algorithm used for generating public/private key pair.
			This parameter shall be supported if the AsymmetricKeyGeneration property of the associated CIM_CertificateManagementCapabilities is TRUE and if the PublicPrivateKeyPair is not specified.
IN	PublicKeySize	uint16	The length of the public key. This parameter shall be supported if the AsymmetricKeyGeneration property of the associated CIM_CertificateManagementCapabilities is TRUE.
IN	PublicPrivateKeyPair	CIM_UnsignedCredential REF	Reference to the instance of CIM_UnsignedCredential representing the public/private key pair
IN	Keystore	CIM_Keystore REF	References the key store to add the newly created X509 self-signed certificate
IN	CredentialContext	CIM_ManagedElement REF	References an instance of CIM_ManagedElement that will utilize the newly created X509 self-signed certificate
IN	Usage	uint16	Describes how the managed element, referenced by CredentialContext parameter, utilizes the self-signed certificate
IN	SignatureAlgorithm	uint16	Indicates the signature algorithm used to sign the X509 self-signed certificate
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob instance created to track the execution initiated by the method invocation
OUT, REQ	SelfSignedCertificate	CIM_X509Certificate REF	References the newly created X509 self- signed certificate

8.4.1 CIM_CertificateManagementService.CreateSelfSignedCertificate() conditional support

If the SupportedMethods property array of the associated instance of

CIM_CertificateManagementCapabilities contains the value 102 (CreateSelfSignedCertificate), the

CreateSelfSignedCertificate() method shall be implemented and shall not return the value 1 (Not

Supported).

553

554

555

556 557

558

561

559 If the SupportedMethods property array of the associated instance of

560 CIM CertificateManagementCapabilities does not contain the value 102 (CreateSelfSignedCertificate),

the CreateSelfSignedCertificate() method shall not be implemented or shall always return the value

562 1 (Not Supported).

576

580

581

587

588

589

8.4.2 Parameter validation

- 564 If the PublicPrivateKeyPair parameter is NULL and the AsymmetricKeyGeneration property of the
- associated instance of CIM_CertificateManagementCapabilities has the value FALSE, then the method
- shall return a value of 2 (Failed).
- If the PublicPrivateKeyPair parameter is NULL and the PublicKeyAlgorithm or PublicKeySize parameters
- are NULL, then the method shall return a value of 2 (Failed).
- 569 If the PublicKeyAlgorithm parameter is not NULL and the KeyAlgorithmSupported array property of the
- 570 associated instance of CIM_CertificateManagementCapabilities does not contain the value of the
- PublicKeyAlgorithm parameter, then the method shall return a value of 2 (Failed).
- 572 If the Subject and AltSubject parameters are both NULL, the method shall return a value of 2 (Failed).
- 573 If the CIM CertificateManagementCapabilities.SupportedSignatureAlgorithms property is implemented
- and the SignatureAlgorithm parameter does not contain a value specified in the
- 575 SupportedSignatureAlgorithms property array, then the method shall return a value 2 (Failed).

8.4.3 Required privileges

- 577 The method invocation shall fail if the Activities property of the CIM_AssociatedPrivilege, referencing the
- 578 CIM_Identity instance representing the executor's security principal, does not contain a value of 2
- 579 (Create) or 6 (Write).

8.5 CIM_CertificateManagementService.ImportEncodedCertificates()

- The ImportEncodedCertificates() method provides the ability to import encoded X509 certificates.
- 583 The ImportEncodedCertificates() method's return code values shall be as specified in Table 12, where
- the method execution behavior matches the return code description. The ImportEncodedCertificates()
- 585 method's parameters are specified in Table 13.
- No standard messages are defined for this method.

Table 12 – CIM_CertificateManagementService.ImportEncodedCertificates() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

Table 13 - CIM CertificateManagementService.ImportEncodedCertificates() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN, REQ	EncodedCertificates[]	string	Single-element octet string array representing the encoded X509 certificates
IN, REQ	Format	uint16	Specifies the format for the encoding of the encoded X509 certificates

Qualifiers	Name	Туре	Description/Values
IN	Keystore	CIM_Keystore REF	References the key store to which the newly imported X509 certificates are to be added
IN	CredentialContext	CIM_ManagedElement REF	References an instance of CIM_ManagedElement that will utilize the newly imported X509 certificates
IN	Usage[]	uint16	Describes how the managed element, referenced by CredentialContext parameter, utilizes the imported certificates
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob created to track the execution initiated by the method invocation
OUT, REQ	NewCertificates[]	CIM_X509Certificate REF	References newly imported X509 certificates

8.5.1 CIM_CertificateManagementService.ImportEncodedCertificates() conditional support

- 592 If the SupportedMethods property array of the associated instance of
- 593 CIM_CertificateManagementCapabilities contains the value 103 (ImportEncodedCertificates), the
- 594 ImportEncodedCertificates() method shall be implemented and shall not return the value 1 (Not
- 595 Supported).

590

591

- 596 If the SupportedMethods property array of the associated instance of
- 597 CIM_CertificateManagementCapabilities does not contain the value 103 (ImportEncodedCertificates), the
- 598 ImportEncodedCertificates() method shall not be implemented or shall always return the value 1 (Not
- 599 Supported).

600 8.5.2 Parameter validation

- 601 If the Format parameter does not contain a value from the InputFormatsSupported array property of the
- 602 associated instance of CIM_CertificateManagementCapabilities, then the method shall return a value of 2
- 603 (Failed).

604

608

8.5.3 Required privileges

- The method invocation shall fail if the Activities property of the CIM AssociatedPrivilege, referencing the
- 606 CIM_Identity instance representing the executor's security principal, does not contain 2 (Create) or 6
- 607 (Write) values.

8.6 CIM_CertificateManagementService.ImportCertificates()

- The ImportCertificates() method provides the ability to import X509 certificates as embedded instances of the CIM X509Certificate class.
- The ImportCertificates() method's return code values shall be as specified in Table 14, where the method
- execution behavior matches the return code description. The ImportCertificates() method's parameters
- are specified in Table 15.
- No standard messages are defined for this method.

616

Table 14 – CIM_CertificateManagementService.ImportCertificates() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

Table 15 – CIM_CertificateManagementService.ImportCertificates() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN, REQ	InputCertificates[]	string	Embedded instances of CIM_X509Certificate representing the imported certificates
IN	Keystore	CIM_Keystore REF	References the key store to which to add the newly imported X509 certificates
IN	CredentialContext	CIM_ManagedElement REF	References an instance of CIM_ManagedElement that will utilize the newly imported X509 certificates
IN	Usage[]	uint16	Describes how the managed element, referenced by the CredentialContext parameter, utilizes the imported certificates
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob instance created to track the execution initiated by the method invocation
OUT, REQ	NewCertificates[]	CIM_X509Certificate REF	References newly imported X509 certificates

617 8.6.1 CIM CertificateManagementService.ImportCertificates() conditional support

- 618 If the SupportedMethods property array of the associated instance of
- 619 CIM_CertificateManagementCapabilities contains the value 104 (ImportCertificates), the
- 620 ImportCertificates() method shall be implemented and shall not return the value 1 (Not Supported).
- 621 If the SupportedMethods property array of the associated instance of
- 622 CIM CertificateManagementCapabilities does not contain the value 104 (ImportCertificates), the
- 623 ImportCertificates() method shall not be implemented or shall always return the value 1 (Not Supported).

624 8.6.2 Required privileges

- The method invocation shall fail if the Activities property of the CIM AssociatedPrivilege, referencing the
- 626 CIM_Identity instance representing the executor's security principal, does not contain a value of 2
- 627 (Create) or 6 (Write).

628

8.7 CIM CertificateManagementService.ExportEncodedCertificates()

The ExportEncodedCertificates() method provides the ability to export X509 certificates using a specified encoded format.

- The ExportEncodedCertificates() method's return code values shall be as specified in Table 16 where the
- 632 method execution behavior matches the return code description. The ExportEncodedCertificates()
- 633 method's parameters are specified in Table 17.
- No standard messages are defined for this method.

Table 16 – CIM_CertificateManagementService.ExportEncodedCertificates() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

Table 17 - CIM_CertificateManagementService.ExportEncodedCertificates() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN, REQ	CertificatesToExport[]	CIM_X509Certificate REF	Reference to the CIM_ManagedElement for which metrics will be controlled
IN, REQ	Format	uint16	Specifies the format for the encoding of the encoded X509 certificates to export
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob created to track the execution initiated by the method invocation
OUT, REQ, OctetString	EncodedCertificates[]	string	Single-element octet string array representing the exported X509 certificates.
			All the X509 certificates shall be contained in the first element of the array. All other array element shall be ignored.

8.7.1 CIM_CertificateManagementService.ExportEncodedCertificates() conditional support

- 640 If the SupportedMethods property array of the associated instance of
- 641 CIM_CertificateManagementCapabilities contains the value 105 (ExportEncodedCertificate), the
- 642 ExportEncodedCertificates() method shall be implemented and shall not return the value 1 (Not
- 643 Supported).

635 636

637

638

639

648

- 644 If the SupportedMethods property array of the associated instance of
- 645 CIM_CertificateManagementCapabilities does not contain the value 105 (ExportEncodedCertificate), the
- 646 ExportEncodedCertificates() method shall not be implemented or shall always return the value 1 (Not
- 647 Supported).

8.7.2 Parameter validation

- If the Format parameter does not contain a value from the OutputFormatsSupported array property of the associated instance of CIM_CertificateManagementCapabilities, then the method shall return a value of 2 (Failed).
- 652 If the instances of CIM X509Certificate in the adjacent indexes of the CertificatesToExport array
- parameter are not associated with each other using the CIM_ConcreteDependency association, where

666

667

the instance at the lower index is referenced by the Antecedent property and the instance at the higher index is referenced by the Dependent property, the method shall return a value of 2 (Failed).

8.7.3 Required privileges

The method invocation shall fail if the Activities property of the CIM_AssociatedPrivilege instance, referencing the CIM_Identity instance representing the executor's security principal, does not contain a value of 5 (Read).

660 8.8 CIM_CertificateManagementService.ApplyCRL()

- The ApplyCRL() method provides the ability to apply CRL in an encoded format.
- The ApplyCRL() method's return code values shall be as specified in Table 18, where the method execution behavior matches the return code description. The ApplyCRL() method's parameters are specified in Table 19.
- No standard messages are defined for this method.

Table 18 - CIM_CertificateManagementService.ApplyCRL() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

Table 19 - CIM_CertificateManagementService.ApplyCRL() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN, REQ, OctetString	EncodedCRL[]	string	Single-element string octet array representing the encoded CRL.
			The encoded CRL shall be contained in the first element of the array. All other array element shall be ignored.
IN, REQ	Format	uint16	Specifies the format for the encoding of the encoded CRL
IN	Keystore	CIM_Keystore REF	References the key store to which the CRL will be applied
IN	CredentialContext	CIM_ManagedElement REF	References an instance of CIM_ManagedElement for which the certificates are revoked
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob created to track the execution initiated by the method invocation
OUT, REQ	AppliedCRL	CIM_X509CRL REF	References the newly applied CRL

668 8.8.1 CIM_CertificateManagementService.ApplyCRL() conditional support

- 669 If the SupportedMethods property array of the associated instance of
- 670 CIM_CertificateManagementCapabilities contains the value 106 (ApplyCRL), the ApplyCRL() method
- shall be implemented and shall not return the value 1 (Not Supported).
- 672 If the SupportedMethods property array of the associated instance of
- 673 CIM_CertificateManagementCapabilities does not contain the value 106 (ApplyCRL), the ApplyCRL()
- method shall not be implemented or shall always return the value 1 (Not Supported).

675 8.8.2 Parameter validation

- 676 If the InputFormatsSupported array property of the associated instance of
- 677 CIM_CertificateManagementCapabilities does not contain the value of the Format parameter, the method
- shall return a value of 2 (Failed).

8.8.3 Required privileges

- The method invocation shall fail if the Activities property of the CIM AssociatedPrivilege, referencing the
- 681 CIM_Identity instance representing the executor's security principal, does not contain a value of 2
- 682 (Create) or 6 (Write).

679

690

8.9 CIM_CertificateManagementService.ApplyDecodedCRL()

- The ApplyDecodedCRL() method provides the ability to apply CRL in the decoded format.
- The ApplyDecodedCRL() method's return code values shall be as specified in Table 18, where the
- method execution behavior matches the return code description. The ApplyDecodedCRL() method's
- parameters are specified in Table 19.
- No standard messages are defined for this method.

689 Table 20 – CIM_CertificateManagementService.ApplyDecodedCRL() method: Return code values

Value	Description	
0	Operation completed successfully	
1	Operation unsupported	
2	Failed	
4096	Job created – only Job output parameter shall be returned.	

Table 21 – CIM_CertificateManagementService.ApplyDecodedCRL() method: Parameters

Qualifiers	Name	Туре	Description/Values
IN, REQ	Issuer	string	Issuer shall contain information as required by section 4.1.2.4 of <u>RFC3280</u> , formatted based on <u>RFC4514</u> .
IN, REQ	SerialNumbers[]	String	Serial numbers of the certificates contained in the CRL
IN	Keystore	CIM_Keystore REF	References the key store to which the CRL will be applied

Qualifiers	Name	Туре	Description/Values
IN	CredentialContext	CIM_ManagedElement REF	References an instance of CIM_ManagedElement for which the certificates are revoked
OUT	Job	CIM_ConcreteJob REF	Reference to the ConcreteJob created to track the execution initiated by the method invocation
OUT, REQ	AppliedCRL	CIM_X509CRL REF	References newly applied CRL

8.9.1 CIM_CertificateManagementService.ApplyDecodedCRL() conditional support

- 692 If the SupportedMethods property array of the associated instance of
- 693 CIM_CertificateManagementCapabilities contains the value 107 (ApplyDecodedCRL), the
- ApplyDecodedCRL() method shall be implemented and shall not return the value 1 (Not Supported).
- 695 If the SupportedMethods property array of the associated instance of
- 696 CIM CertificateManagementCapabilities does not contain the value 107 (ApplyDecodedCRL), the
- 697 ApplyDecodedCRL() method shall not be implemented or shall always return the value 1 (Not
- 698 Supported).

703

699 8.9.2 Required privileges

- 700 The method invocation shall fail if the Activities property of the CIM AssociatedPrivilege instance,
- 701 referencing the CIM Identity instance representing the executor's security principal, does not contain a
- value of 2 (Create) or 6 (Write).

8.10 Profile conventions for operations

- For each profile class (including associations), the implementation requirements for operations, including those in the following default list, are specified in class-specific subclauses of this clause.
- 706 The default list of operations is as follows:
- 707 GetInstance
- 708 Associators
- 709 AssociatorNames
- 710 References
- 711 ReferenceNames
- The second of the
- TenumerateInstanceNames

714 8.11 CIM_CertificateManagementCapabilities

- 715 All operations in the default list in 8.10 shall be implemented as defined in DSP0200.
- 716 NOTE: Related profiles may define additional requirements on operations for the profile class.

717 8.12 CIM_CertificateManagementService

- All operations in the default list in 8.10 shall be implemented as defined in DSP0200.
- 719 NOTE: Related profiles may define additional requirements on operations for the profile class.

720 8.13 CIM CredentialContext

- 721 Table 22 lists implementation requirements for operations. If implemented, these operations shall be
- implemented as defined in <u>DSP0200</u>. In addition, and unless otherwise stated in Table 22, all operations
- in the default list in 8.10 shall be implemented as defined in DSP0200.
- 724 NOTE: Related profiles may define additional requirements on operations for the profile class.

8.24 CIM X509Certificate

Table 30 lists implementation requirements for operations. If implemented, these operations shall be implemented as defined in <u>DSP0200</u>. In addition, and unless otherwise stated in Table 30, all operations in the default list in 8.10 shall be implemented as defined in <u>DSP0200</u>.

781 NOTE: Related profiles may define additional requirements on operations for the profile class.

Table 30 - Operations: CIM_X509Certificate

Operation	Requirement	Messages
ModifyInstance	Optional	See 8.24.1.
DeleteInstance	Optional	See 8.24.2.

783 8.24.1 CIM_X509Certificate — ModifyInstance

- 784 If the SupportedMethods property of the CIM_CertificateManagementCapabilities instance associated
- 785 with the Managing Service of the CIM_X509Certificate instance contains a value 107 (Modify
- 786 X509Certificate), then the ModifyInstance operation shall be supported.
- 787 If the invalidation of the certificates is supported, the IsValid property shall be modified using
- 788 the Modify Instance operation.
- 789 The ModifyInstance operation shall fail if the Activities property of the CIM AssociatedPrivilege,
- 790 referencing the CIM_Identity instance representing the executor's security principal, does not contain a
- 791 value of 6 (Write).

792 8.24.2 CIM_X509Certificate — DeleteInstance

- 793 If the SupportedMethods property of the CIM_CertificateManagementCapabilities instance associated
- vith the Managing Service of the CIM_X509Certificate instance contains a value of 108 (Delete
- 795 X509Certificate), then the DeleteInstance operation shall be supported.
- 796 If the removal of the certificates from the key store is supported, the DeleteInstance operation shall be
- 797 supported on the CIM_X509Certificate class.
- 798 The ModifyInstance operation shall fail if the Activities property of the CIM AssociatedPrivilege,
- 799 referencing the CIM_Identity instance representing the executor's security principal, does not contain a
- value of 3 (Delete).

801 8.25 CIM X509CRL

- 802 All operations in the default list in 8.10 shall be implemented as defined in DSP0200.
- 803 NOTE: Related profiles may define additional requirements on operations for the profile class.

9 Use cases

This clause contains object diagrams and use cases for the *Certificate Management Profile*. The contents of this clause are for informative purposes only and do not constitute normative requirements for implementations of this specification.

9.1 Profile registration

Figure 2 describes one of the ways that the implementation can advertise the instantiation of the Certificate Management Profile. Using scoping instance methodology as described in the Profile Registration Profile, profile2 contains the version information for the Certificate Management Profile implementation.

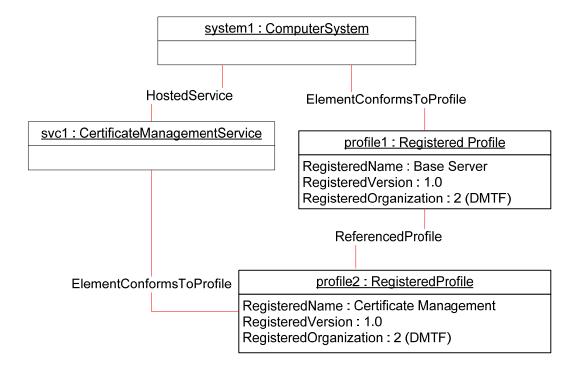

Figure 2 – Profile registration

9.2 Simple certificate management

Figure 3 represents a minimal instantiation of the *Certificate Management Profile* without key stores and certificate utilizers. Webcert1 is the only certificate managed by the service. The managed element that uses the webcert1 certificate is not instantiated, and thus the CredentialContext association does not reference the webcert1 instance. Instead, the webcert1. ElementName property describes the purpose of the certificate. Cap1 represents the capabilities of service1. Webcert1 is the only certificate that is being managed by service1. The managed element that uses the webcert1 certificate is not instantiated, and thus the CredentialContext association does not reference the webcert1 instance. Instead, the webcert1. ElementName property describes the purpose of the certificate.

Version 1.0.0 DMTF Standard 35

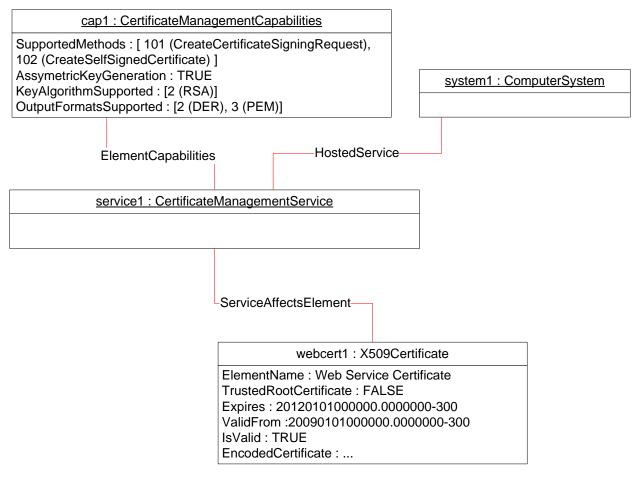

Figure 3 – Simple certificate management

9.3 Keystore

Figure 4 represents an instantiation of the *Certificate Management Profile*. In this instantiation, the instrumentation advertises the ability to create new key stores using the cap1. Supported Methods property, which contains the value 3 (Create Keystore). Upon successful invocation of a similarly named method on service1, a new key store will be created and will be represented by the keystore1 instance. Keystore1 properties will be equal to the Keystore embedded instance parameter's property of the invoked Create Keystore method. The association instances referencing keystore1 are created based on the other parameters of the invoked Create Keystore method. (See 8.2 and the method description in the CIM schema.)

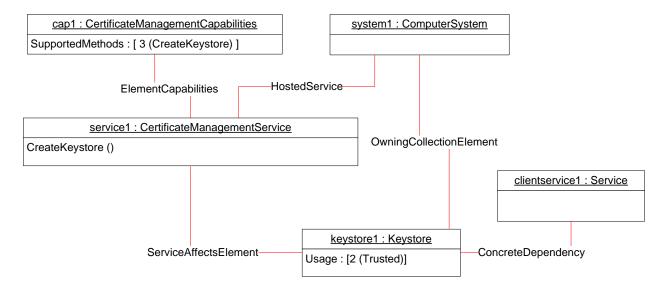

Figure 4 - Key store

9.4 Import asymmetric key

Figure 5 represents an instantiation of the *Certificate Management Profile*. In this instantiation, the instrumentation advertises the ability to import public/private key pairs using the cap1. Supported Methods property, which contains the value 2 (ImportPublicPrivateKeyPair). Upon successful invocation of a similarly named method on service1, a new asymmetric key pair represented by PPKPwebservice1 will be inserted in the key store represented by keystore1. The PPKPwebservice1. PublicKey property will match the PublicKey parameter of the method. PPKPwebservice1 will not expose the private key for security purposes. The association instances referencing PPKPwebservice1 are created based on the other parameters of the invoked method. (See 8.1 and the method description in the CIM schema.)

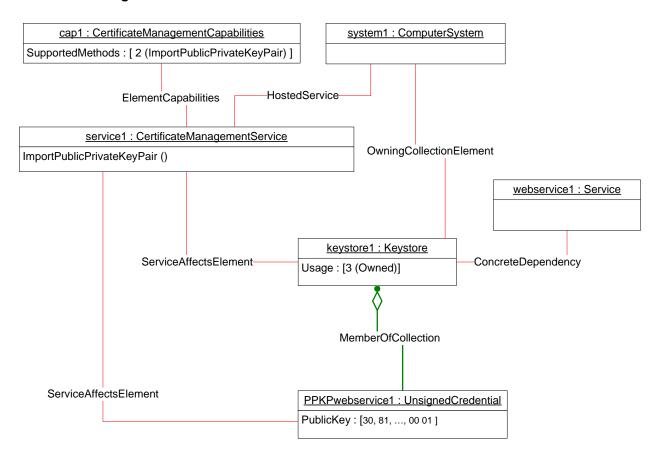

Figure 5 – Importing public/private key pair

9.5 CSR and self-signed certificate

Figure 6 represents an instantiation of the *Certificate Management Profile*. In this instantiation, the instrumentation advertises the ability to create CSRs and self-signed certificates using the cap1.SupportedMethods property, which contains the values 101 (CreateCertificateSigningRequest) and 102 (CreateSelfSignedCertificate). The cap1.AsymmetricKeyGeneration property advertises the capability of service1 to generate asymmetric keys, specifically so that if the Subject, PublicKeyAlgorithm, has PublicKeySize parameters that are valid non-NULL values, the service will be able to create either CSR or the self-signed certificate generating a public/private asymmetric key pair. KeyAlgorithmSupported advertises the value maps that could be used as the value for the PublicKeyAlgorithm parameter. If AsymmetricKeyGeneration is FALSE, to create CSR or a self-signed certificate the PublicPrivateKeyPair parameter needs to reference an instance of CIM_UnsignedCredential, such as PPKPwebservice1, that represents a previously imported public/private asymmetric key pair.

Upon successful invocation of the CreateCertificateSigningRequest method on service1, the CSR will be returned as the CSR[] output parameter. Upon successful invocation of the CreateSelfSignedCertificate method, a new instance of CIM_X509Certificate, webcert1, will be instantiated, and the reference of the instance will be returned as the SelfSignedCertificate output parameter. The association instances referencing webcert1 are created based on the other parameters of the invoked method. (See 8.3, 8.4, and the method descriptions in the CIM schema.)

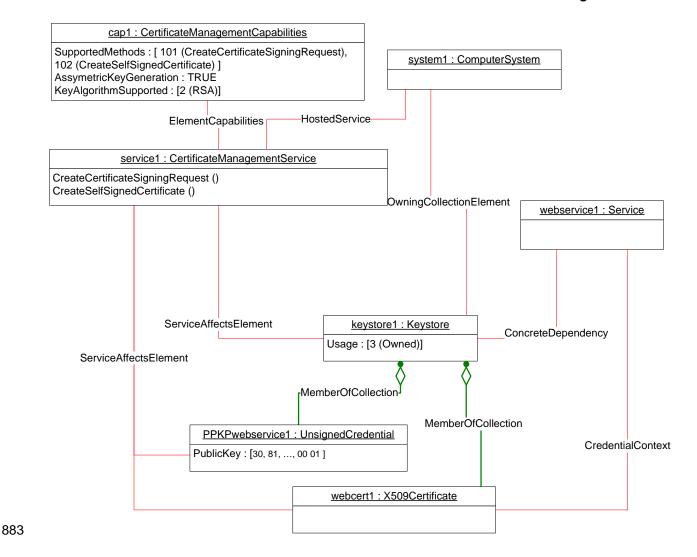

Figure 6 - Creating CSR and self-signed certificate

9.6 Import and export of certificates

Figure 7 represents an instantiation of the *Certificate Management Profile*. In this instantiation, the instrumentation advertises the ability to export and import certificates using the cap1. Supported Methods property, which contains the values 103 (ImportEncodedCertificates) and 105 (ExportEncodedCertificate). The cap1. InputFormatsSupported property advertises the capability of service1 to import certificates in the specified formats and the value of the Format parameter on the InputEncodedCertificates method will match one of the values in this property array. Upon successful invocation of the ImportEncodedCertificates method a new instance of CIM_X509Certificate, webcert1, will be instantiated and the reference of the instance returned as the NewCertificates[] output parameter. The association instances referencing webcert1 are created based on the other parameters of the invoked method. (See 8.5 and the method descriptions in the CIM schema.)

The cap1.OutputFormatsSupported property advertises the capability of service1 to export certificates in the specified formats, and the value of the Format parameter on the ExportEncodedCertificates() method will match one of the values in this property array. In this case, the CertificatestoExport parameter references webcert1 and upon successful invocation of the ExportEncodedCertificates() method the EncodedCertificates[] array will contain the formatted version of webcert1.

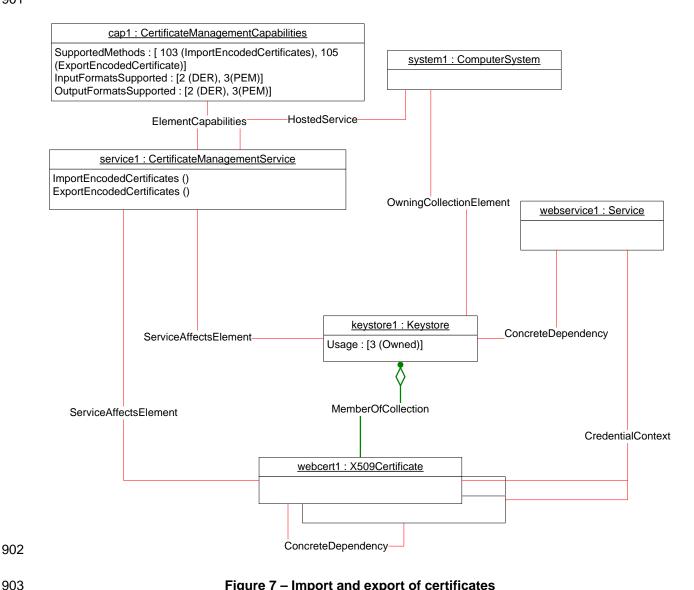

Figure 7 – Import and export of certificates

904 9.7 CRL

905

906

907

908 909

910

911 912 Figure 8 and Figure 9 represent an instantiation of the Certificate Management Profile.

9.7.1 Before applying the CRL

In this instantiation, the instrumentation advertises the ability to apply CRLs to key stores using the cap1.SupportedMethods property, which contains the value 106 (ApplyCRL). The cap1.InputFormatsSupported property advertises the capability of service1 to import CRLs in the specified formats, and the value of the Format parameter on the ApplyCRL method will match one of the values in this property array. The EncodedCRL[] parameter contains the encoded CRL, which consists of serial numbers of revoked certificates. In this case, one of these certificates is represented by webcert1.

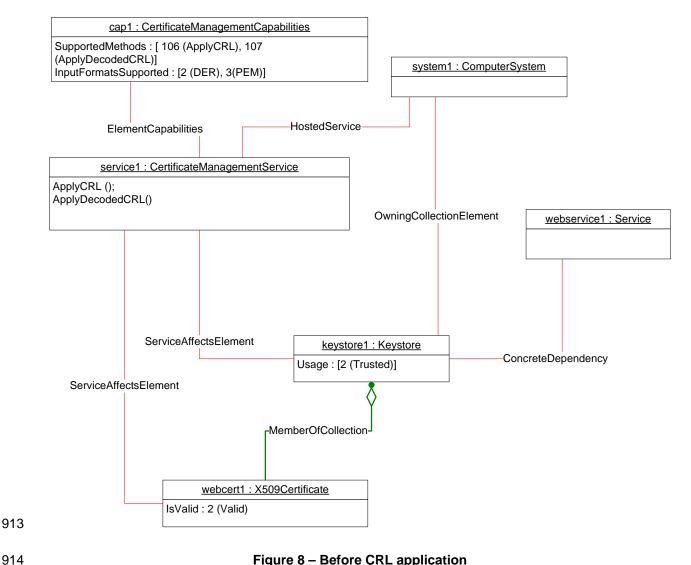

Figure 8 - Before CRL application

9.7.2 After Applying the CRL

915

916

917 918

919

920 921

Upon successful invocation of the ImportEncodedCertificates method a new instance of CIM_X509CRL, webCRL1, will be instantiated and the reference of the instance returned as the NewCertificates[] output parameter. The association instances referencing webCRL1 are created based on the other parameters of the invoked method. (See 8.8 and the method descriptions in the CIM schema.) Upon successful execution, the certificate represented by webcert1 will be revoked and the webcert1.lsValid property will be set to 3 (Invalid).

927

928

Table 33 shows the instances of CIM elements for this profile. Instances of the CIM elements shall be implemented as described in Table 33. Clauses 7 ("Implementation") and 8 ("Methods") may impose additional requirements on these elements.

Table 33 - CIM elements: Certificate Management Profile

Element Name	Requirement	Description
Classes		
CIM_AssociatedPrivilege	Optional	See 10.18 and 7.4.
CIM_CertificateManagementCapabilities	Mandatory	See 10.1 and 7.2.2.
CIM_CertificateManagementService	Mandatory	See 10.2 and 7.2.
CIM_CredentialContext	Optional	See 10.3.
CIM_ConcreteDependency (CIM_Keystore)	Optional	See 10.4.

Element Name	Requirement	Description
CIM_ConcreteDependency (CIM_X509Certificate)	Optional	See 10.5.
CIM_ConcreteDependency	Optional	See 10.6
CIM_ElementCapabilities	Mandatory	See 10.7.
CIM_HostedService	Mandatory	See 10.8.
CIM_Keystore	Optional	See 7.1 and 10.9.
CIM_ServiceAffectsElement (CIM_Credential)	Optional	See 10.10.
CIM_MemberOfCollection	Conditional	See 10.11.
CIM_OwningCollectionElement	Conditional	See 10.12.
CIM_RegisteredProfile	Mandatory	See 10.13.
CIM_ServiceAffectsElement (CIM_Keystore)	Conditional	See 10.14.
CIM_UnsignedCredential	Mandatory	Zero or more instances shall be implemented.
		See 10.15.
CIM_X509Certificate	Mandatory	Zero or more instances shall be implemented.
		See 7.3 and 10.16.
CIM_X509CRL	Mandatory	Zero or more instances shall be implemented.
		See 10.17.
Indications		
None defined in this profile		

10.1 CIM_CertificateManagementCapabilities

930 CIM_CertificateManagementCapabilities is used to represent the capabilities of the

CIM_CertificateManagementService. Table 34 details the requirements for instances of

CIM_CertificateManagementCapabilities.

929

931

932

ElementProvidingContext	Mandatory	Key: This property shall be a reference to the instance of the subclass of CIM_ManagedElement.
		Cardinality * indicating zero or more references

10.4 CIM_ConcreteDependency (CIM_Keystore)

CIM_ConcreteDependency is used to associate instances of a CIM_ManagedElement subclass with an instance of CIM_Keystore that the managed element utilizes. Table 37 details the requirements for instances of CIM_ConcreteDependency.

Table 37 - Class: CIM_ConcreteDependency

Elements	Requirement	Notes
Antecedent	Mandatory	Key: This property shall be a reference to the CIM_ManagedElement.
		Cardinality * indicating zero or more references
Dependent	Mandatory	Key: This property shall be a reference to the CIM_Keystore.
		Cardinality * indicating zero or more references

10.5 CIM_ConcreteDependency (CIM_X509Certificate)

CIM_ConcreteDependency is used to associate an instance of CIM_X509Certificate with another instance of CIM_X509Certificate to show the certificate chain hierarchy. Table 38 details the requirements for instances of CIM_ConcreteDependency.

Table 38 - Class: CIM_ConcreteDependency

Elements	Requirement	Notes
Antecedent	Mandatory	Key: This property shall be a reference to the CIM_X509Certificate instance representing the signing certificate.
		Cardinality 01 indicating zero or one reference
Dependent	Mandatory	Key: This property shall be a reference to the CIM_X509Certificate instance representing the signed certificate.
		Cardinality * indicating zero or more references

10.6 CIM_ConcreteDependency

CIM_ConcreteDependency is used to associate an instance of CIM_UnsignedCredential with an instance of CIM_X509Certificate that was generated based on the imported CIM_UnsignedCredential instance representing public-private key pair. Table 40 details the requirements for instances of CIM_ConcreteDependency.

InstanceID	Mandatory	Key
ElementName	Mandatory	Pattern ".*"

979

984

Elements	Requirement	Notes
Usage	Mandatory	None

10.10 CIM_ServiceAffectsElement (CIM_Credential)

- 974 CIM_ServiceAffectsElement is used to associate an instance of CIM_CertificateManagementService with 975 an instance of CIM_X509Certificate, CIM_X509CRL, or CIM_UnsignedCredential. If the CIM_Keystore 976 instance exists, CIM_ServiceAffectsElement is optional.
- 977 Table 43 contains the requirements for elements of this class.

978 Table 43 – Class: CIM_ServiceAffectsElement (CIM_Credential)

Elements	Requirement	Notes
AffectedElement	Mandatory	Key : This property shall reference the instance of CIM_X509Certificate, CIM_X509CRL, or CIM_UnsignedCredential.
		Cardinality * indicating zero or more references
AffectingElement	Mandatory	Key : This property shall reference the instance of CIM_CertificateManagementService.
		Cardinality 1 indicating one reference
ElementAffects	Mandatory	Matches 5 (Manages)

10.11 CIM_MemberOfCollection

- 980 CIM_MemberOfCollection is used to associate PKI Credential Instances with the instance of 981 CIM_Keystore representing the key store that accumulates the PKI-based credentials. If the PKI 982 Credential Instance exists, the CIM_MemberOfCollection instance is mandatory.
- 983 Table 44 provides information about the properties of CIM_MemberOfCollection.

Table 44 - Class: CIM_MemberOfCollection

Properties	Requirement	Notes
GroupComponent	Mandatory	Key: This property shall reference an instance of CIM_Keystore.
		Cardinality 1 indicating one and only one reference
PartComponent	Mandatory	Key: This property shall reference PKI Credential Instances.
		Cardinality * indicating zero or more references

990

991

992 993

994

995

10.12 CIM_OwningCollectionElement

986 CIM_OwningCollectionElement is used to associate a CIM_Keystore instance with its scoping 987 CIM_System instance. If the CIM_Keystore instance exists, the CIM_OwningCollectionElement is 988 mandatory.

Table 45 provides information about the properties of CIM_OwningCollectionElement.

Table 45 - Class: CIM_OwningCollectionElement

Properties	Requirement	Notes
OwningElement	Mandatory	Key: This property shall reference the Scoping Instance of this profile.
		Cardinality 1 indicating one and only one reference
OwnedElement	Mandatory	Key: This property shall be an instance of CIM_Keystore.
		Cardinality * indicating zero or more references

10.13 CIM_RegisteredProfile

The CIM_RegisteredProfile class is defined by the <u>Profile Registration Profile</u>. The requirements denoted in Table 46 are in addition to those mandated by the <u>Profile Registration Profile</u>.

Table 46 - Class: CIM_RegisteredProfile

Elements	Requirement	Notes
RegisteredName	Mandatory	This property shall have a value of "Certificate Management".
RegisteredVersion	Mandatory	This property shall have a value of "1.0.0".
RegisteredOrganization	Mandatory	This property shall have a value of 2 ("DMTF").

10.14 CIM_ServiceAffectsElement (CIM_Keystore)

996 CIM_ServiceAffectsElement is used to associate an instance of CIM_CertificateManagementService with 997 an instance of CIM_Keystore that represents a key store that could be managed using the service. If the 998 CIM_Keystore instance exists, CIM_ServiceAffectsElement is mandatory.

999 Table 47 contains the requirements for elements of this class.

Table 47 - Class: CIM_ServiceAffectsElement (CIM_Keystore)

Elements	Requirement	Notes
AffectedElement	Mandatory	Key : This property shall reference the instance of CIM_Keystore.
		Cardinality * indicating zero or more references
AffectingElement	Mandatory	Key : This property shall reference the instance of CIM_CertificateManagementService.
		Cardinality 1 indicating one reference.
ElementAffects	Mandatory	Matches 5 (Manages)

1001 10.15 CIM_UnsignedCredential

CIM_UnsignedCredential is used to represent the Asymmetric key (public/private key pair). Table 48 details the requirements for instances of CIM_UnsignedCredential.

1004

1002

1003

Table 48 - Class: CIM_UnsignedCredential
